

OVERABUNDANT WHITE-TAILED DEER IN TEXAS: IMPACTS ON PEOPLE, COMMUNITIES AND THE LAND

May 18, 2006

Texas State University
San Marcos, Texas

White-tailed deer are a valuable natural resource providing enjoyment for thousands across Texas and are very adaptable to life near people. However, when deer numbers escalate and they become overabundant, deer can threaten wildlife and plant diversity as well as cause economic, health and safety concerns. Some Texas communities are currently confronting these issues and others soon will be. This seminar will allow attendees to learn about the experiences of communities as well as hear from nationally recognized experts currently working with overabundant deer issues.

Thursday, May 18, 2006 – 7:45 a.m. to 5:00 p.m.

- How did we get this many deer in Texas and what does the future hold?
 - Impact of overabundant deer populations
 - Current management tools
 - What has and has not worked
 - Overabundant deer as a planning issue
 - Building consensus among stakeholders
