## New Inland Fisheries District Office to be installed at Lake Corpus Christi State Park

A collaborative effort between the State Parks Division and Inland Fisheries Division of the Texas Parks and Wildlife Department will see the installation of a new Fisheries District Office Building (~8,000 SF) just outside the entrance gate to Lake Corpus Christi State Park on state park property. The project is currently in the planning and design phase, which is expected to be completed in the spring of 2021. Construction is anticipated to begin by the end of 2021.

The general purpose of the building is to provide office and workspace for staff dedicated to the management of diverse freshwater fisheries resources throughout the greater Corpus Christi area. The overarching goal of this management is to provide the best possible angling while protecting and enhancing freshwater aquatic resources. The district's activities include fisheries management and research, ecosystem and habitat assessment, angler education and fishing access, and other aquatic management activities.

The new building will also provide office space for State Park staff, improving the operation of the state park and the visitor experience.

Questions and comments for this phase of the project will be accepted until November 1st, 2020 and may be submitted to:
