Austin, Texas 78744

## ACKNOWLEDGMENTS

We would like to thank Leon Stephens for assistance in editing the tables. We also appreciate the review of the manuscript provided by Larry McEachron, Tom Heffernan, Al Green, C. E. Bryan, Lynn Benefield, Bob Hofstetter, Jerry Clark and Maury Ferguson.

This project was jointly funded by the Texas Parks and Wildlife Department and the U.S. Department of Commerce, National Oceanic and Atmospheric Administration, National Marine Fisheries Service under SF-30.

## ABSTRACT

The Texas Parks and Wildlife Department in cooperation with the National Marine Fisheries Service collects data on commercially landed finfish and shellfish from Texas bays and from the Gulf of Mexico off Texas.

Shrimp continue to be the most important commercial seafood product in Texas. They comprised 82% of the weight and 92% of the ex-vessel value of total seafood landings, while Eastern oyster, blue crab and finfish accounted for 18% of the total weight landed and 8% of the ex-vessel value in 1985. Total reported landings in 1985 were 100,299,900 lb with an ex-vessel value of \$176,031,900. This is the fourth highest poundage and value recorded since 1977.

Since 1977, the mean price/lb paid to commercial fishermen increased for all species except for "other" shrimp and "other" finfish. With the exception of shrimp, prices of finfish and shellfish increased from 1984 to 1985.

## INTRODUCTION

Gulland (1977) emphasized the importance to the fishery manager of knowing the landings of a marine resource. Landings data from both recreational and commercial fishermen are required to assess the needs for and the impacts of saltwater fishing regulations. Economic and sociologic information can also be inferred from landings data to allow for management based on the concept of optimum sustainable yield (Radovich 1975). Annual recreational fish landings in Texas have been estimated since 1974 based on on-site interviews at fishing access sites (Osburn and Ferguson 1986).

Commercial landings of marine species from Texas bays and the Gulf of Mexico (Gulf) off Texas (Fig. 1) have been collected from seafood dealers since 1887 (Perret et al. 1980). These early data were collected sporadically until 1936 when annual surveys were initiated (Game, Fish and Oyster Commission 1937). Since 1936, the Texas Parks and Wildlife Department (TPWD) has monitored the landings and value of the marine fishes, oysters, crabs and shrimp through a mandatory self-reporting system known as the Monthly Marine Products Report (MMPR, Fig. 2) which is completed by seafood dealers. Since 1956, the National Marine Fisheries Service (NMFS) has collected landings data on shrimp through dealer reports and shrimp vessel crew interviews (Prytherch 1980) while TPWD continued to collect data on fishes, crabs and oysters. Informal data exchange between agencies has permitted the compilation of total self-reported landings of marine species. Beginning 1 April 1985, TPWD and NMFS instituted a formal cooperative agreement to collect and exchange commercial fisheries statistics (Fig. 3).

From 1977-1981, additional landings information, including daily landings by species, was required of commercial finfish fishermen through the use of Individual Sales Transaction (IST) forms (Fig. 4). The use of the IST form was discontinued in March 1982 by the Texas Parks and Wildlife Commission because the data were inaccurate and the reporting system was largely duplicative (Green and Thompson 1981).

This report presents the landings and ex-vessel value of self-reported transactions from seafood dealers to TPWD, and landings and ex-vessel value data collected by NMFS, from 1977 through 1985.

## MATERIALS AND METHODS

Licensed seafood dealers were required to complete an MMPR listing the total weight and price paid for each species (Table 1) purchased from commercial fishermen each month. MMPRs were due to TPWD on or before the 10th day of each month and detailed the preceding month's transactions. The Division of Statistics-Market News, NMFS, collected shrimp and menhaden landings and value data. Shrimp landings reported on MMPRs were provided to NMFS and landings of shrimp and finfish gathered by NMFS were provided to TPWD.

Each MMPR was checked by TPWD personnel for completeness. Necessary corrections were made after contacting each dealer by telephone where possible or in person as needed. All seafood products, except Eastern oyster (Crassostrea virginica), which were not reported in live weight by dealers were converted to live weight (round weight) using conversion factors listed in Appendix A. Eastern oyster landings were converted to meat weight (Appendix A, Table A.3).

Landings of Eastern oyster from leases were reported by leaseholders through MMPRs, monthly landings forms submitted to the Seabrook office of TPWD (Fig. 5) and annual summary forms (Fig. 6) submitted to the Austin Headquarters of TPWD. In the case of discrepancies between monthly and annual summaries, the highest values for landings were used. Eastern oyster landings presented in this report, except for Appendix G, represent MMPR data only and are comprised of landings from both private leases and public reefs. Eastern oyster landings in Appendix G are from private leases only.

Gulf shrimp landings at Texas ports as reported to TPWD by the Division of Statistics-Market News, NMFS, may include the landings of shrimp from waters of other states and countries as well as those of Texas. NMFS reports shrimp landings from shrimp fishing grid zones located in particular geographical areas, including Texas, in their publication Gulf Coast Shrimp Data. Gulf shrimp landings in this report are pooled for all grid zones off Texas. Monthly shrimp landings for 1979 through 1985, as reported to TPWD by NMFS, are preliminary data and may be revised.

Any difference in this report compared to previous reports is due to updating of the data base and the most recent report should be considered the most accurate. Except where noted, data are reported by calendar year.

## RESULTS

Over 100,000,000 lb of seafood valued at over \$176,000,000 were commercially landed in Texas in 1985 (Tables 2 and 3). Shrimp constituted 82% of the weight and 92% of the ex-vessel value of all species landed in 1985. Eastern oyster, blue crab (Callinectes sapidus), and finfish comprised 18% of the total pounds landed in 1985 and 5%, 2% and 1% of the total ex-vessel value, respectively. Total weight landed of finfish and shellfish in 1985 was within the range reported from 1977 through 1984 (Table 2). The total value for 1985 was lower than that reported for the last three consecutive years (Table 3).

Brown shrimp (Penaeus aztecus), pink shrimp (P. duorarum) and white shrimp (P. setiferus) constituted 80-91% of all shellfish landings in all years (Table 2). From 1977 to 1985, brown and pink shrimp landings fluctuated between 50,459,300 lb and 78,494,000 lb, while white shrimp landings ranged from 14,235,300 lb to 27,952,100 lb. The value of brown and pink shrimp generally increased from \$100,815,900 in 1977 to over \$131,000,000 in 1981 and 1982 (Table 3). The value of white shrimp ranged from \$24,627,200 in 1977 to \$53,607,100 in 1984. The 1985 Eastern oyster

landings of 5,044,200 lb valued at \$8,590,800 were the second highest landings and value on record. Blue crab landings (6,952,000 lb - 9,705,700 lb) and values (\$1,928,500 - \$3,304,000) have remained relatively stable but were highest in 1985. From 1984 to 1985 stone crab (Menippe mercinaria) landings increased by 116,200 lb (510%) and \$97,100 (678%) in value (Tables 8, 9, 14 and 15).

From 1977 to 1981 red drum (Sciaenops ocellatus), spotted seatrout (Cynoscion nebulosus) and black drum (Pogonias cromis) constituted 71-73% of the pounds and 70-80% of the value of all finfish landings (Tables 4-7, 12 and 13). The 67th Legislature prohibited the sale of red drum and spotted seatrout effective 1 September 1981. During 1985, black drum, flounder (Paralichthys sp.) and snapper (Lutjanidae) constituted 54% of all finfish landings and 77% of all finfish values. From 1984 to 1985, landings of black drum decreased 267,100 lb (30%) and decreased \$29,500 (7%) in value; flounder increased 57,800 lb (15%) and increased \$88,500 (25%) in value; and snapper increased 179,900 lb (40%) and increased \$357,000 (44%) in value (Tables 2 and 3).

In each year, shrimp were the primary species landed from the bays and Gulf. In the bays, they constituted 48-62% of the total weight landed and 54-76% of the total value during each year; in the Gulf, shrimp constituted approximately 99% of both the total weight and total value during each year (Tables 4, 5, 10 and 11). Over 80% of the pounds of total shrimp landed valued at more than \$146,000,000 in 1985 were caught in the Gulf; the remainder valued at more than \$15,000,000 were caught in Texas bays. Over 84% of the brown and pink shrimp valued at \$107,535,600 and 71% of the white shrimp valued at \$38,360,800 were caught in the Gulf in 1985. Almost 57% of the total landings of finfish valued at \$913,000 were caught in Texas bays; the remainder valued at \$1,713,800 were caught in the Gulf.

The mean price/lb paid to commercial fishermen has generally increased for all species since 1977 except for "other" shrimp which decreased from \$1.11/lb in 1977 to \$0.27/lb in 1985 and "other" finfish which decreased from \$0.47/lb in 1977 to \$0.44/lb in 1985 (Tables 16 and 17). The price for snapper in 1985 was a record high (\$1.86/lb) and increased \$0.05/lb (3%) from 1984. The price for flounder (\$1.00/lb), sheepshead (Archosargus probatocephalus) (\$0.22/lb), and black drum (\$0.66/lb) increased \$0.08/lb (9%), \$0.01/lb (5%), and \$0.16/lb (32%), respectively, from 1984 to 1985. The price for brown and pink shrimp (\$1.97/lb) decreased \$0.06/lb (3%) and the price for white shrimp (\$1.97/lb) decreased \$0.34/lb (15%) in the past year. The price for blue crab (\$0.34/lb) increased \$0.09/lb (36%) while the price for oyster meat (\$1.70/lb) increased \$0.09/lb (6%) from 1984. The price for stone crab (\$0.82/lb) increased \$0.12/lb (17%) in the past year.

Weight and ex-vessel value of commercial landings reported during 1977-1985 are presented for Texas bay systems in Appendix B and for grid zones of the Gulf in Appendix C. The weight and value of 1985 seafood landings in Texas bay systems were highest in the Galveston Bay system; the weight of landings other than shrimp in the Gulf was highest in grid

zone 19.0 (offshore of the Matagorda and San Antonio Bay systems) while the value was highest in grid zone 21.0 (offshore of the lower Laguna Madre system).

Monthly summaries of landings and ex-vessel values for Texas bay systems and for grid zones of the Gulf during 1985 are presented in Appendices D and E, respectively. Weight and value varied among bay systems and grid zones by month and species. Nearly 58% of the weight and 52% of the value of brown and pink shrimp from the Gulf in 1985 was landed during July - September. Over 53% of the weight and 49% of the value of white shrimp from the Gulf in 1985 was landed during September - November.

Annual weight and value of menhaden (*Brevoortia* sp.) caught off Texas but landed commercially in Louisiana during 1977-1985 are presented in Appendix F. Weight and value have annually averaged 93,444,700 lb and \$3,799,800, respectively.

Annual volume of Eastern oyster transplanted to and landings and value from private oyster leases in Texas bays during 1977-1985 are presented in Appendix G. Lease numbers and acreage have generally increased since 1977, but weight and value of landings have fluctuated widely among years.

The number of commercial licenses sold in Texas in each fiscal year (September-August) from 1956 to 1985 are presented in Appendix H. Retail fish dealer licenses sold in 1985 (2,683) decreased 55% from 1984; wholesale fish licenses (251) decreased 36%.

#### DISCUSSION

Commercial fishing continues to be an important industry in Texas. Approximately 96,000,000 lb of landed seafood worth about \$167,000,000 in ex-vessel value alone are reported annually. Using an expansion factor of approximately 3 (Grubb 1973), the total economic impact of this industry at the wholesale level in Texas approximates one-half billion dollars annually. This does not include over 93,000,000 lb of menhaden worth nearly \$3,800,000 that are annually caught off Texas but landed in Louisiana.

Brown shrimp is the single most valuable species in the commercial fishery. Although landings of brown shrimp are not reported separately from those of pink shrimp, Christmas and Etzold (1977) have estimated that brown shrimp constitute about 95% of the landings of these two species combined. The value of the bay fishery relies primarily on white shrimp followed by brown and pink shrimp, Eastern oyster, blue crab and finfish.

Although commercial landings data have been used to determine the relative abundance of the resource, several assumptions must be made. In particular, the amount of inaccurate or incomplete reporting is typically unknown and must be considered constant when making temporal or spatial comparisons. Different reporting requirements can affect the amount of non-reporting and, thus, an estimate of relative abundance based on reported landings (Green and Thompson 1981). The problem of non-reporting by seafood dealers is seldom considered by fisheries managers when using

commercial landings data as the basis for management decisions (Cushing 1970).

Deficiencies in reporting requirements and subsequent enforcement also affect the utility of commercial landings data. The 69th Legislature did enact, effective 1 September 1985, increased penalties of \$10-\$200 with the possibility of license forfeiture for failure to file a required report (Anonymous 1985). Present Texas law, however, makes it difficult to assure that all commercial landings are reported; for example, (1) those who purchase seafood products directly from commercial fishermen without the intent to resell the products are exempt from reporting, and (2) seafood products landed but not bought or handled by Texas dealers (i.e., shipped and sold out of state) are exempt from being reported. Another deficiency in the present reporting system is that the MMPRs do not provide estimates of commercial fishing effort by gear type for each species landed. These inconsistencies limit the use of these commercial data for fisheries management purposes.

Dear Al:

Enclosed is a letter that your staff can provide to seafood dealers in Texas who handle mainly shrimp but also purchase fish, crabs, or oysters infrequently. This letter should be signed by the dealer who wishes to provide seafood landings data to NMFS for submission to the Parks and Wildlife Department (TPWD) pursuant to our informal agreement that has been in place since 1960 whereby NMFS collects commercial shrimp landings and TPWD collects all other seafood landings. Once signed, a copy of each letter should be sent to Dr. Gary Matlock at 4200 Smith School Road, Austin, Texas 78744.

Thank you for your cooperation in minimizing duplication of our respective programs. Please contact me if you have any questions.

Sincerely,

Robert J. Kemp  
Director of Fisheries

Dear Seafood Dealer:

The Parks and Wildlife Department and the National Marine Fisheries Service are responsible for gathering information on the commercial landings of seafood in Texas. The Texas Parks and Wildlife Code requires that you report all purchases of seafood to the Texas Parks and Wildlife Department by the 10th of each month.

The National Marine Fisheries Service also requires reporting of shrimp landings. To reduce the burden on you, the dealer, and to prevent duplication of government programs, the Parks and Wildlife Department and the National Marine Fisheries Service cooperate in collecting landings data. The Department focuses on dealers buying fish, crabs, and oysters while the Service visits shrimp dealers. The two agencies exchange the data collected so you do not have to complete two reports.

However, there are occasions when dealers buying mainly shrimp will buy other seafood. FOR YOUR CONVENIENCE, you may provide the data on these other seafood purchases to the National Marine Fisheries Service if you so choose. By providing these data to the National Marine Fisheries Service, you will have met your obligation to provide reports of seafood purchases to the Parks and Wildlife Department.

If you wish to provide data on all seafood purchases you make to the National Marine Fisheries Service for transmission to the Texas Parks and Wildlife Department, please provide the information requested, sign, date and return to the National Marine Fisheries Service.

If you choose not to provide these data to the National Marine Fisheries Service, then you must submit them to the Texas Parks and Wildlife Department.

Thank you for your cooperation.

Sincerely,

Charles D. Travis  
Executive Director

Section 76.017 - 76.018 Parks and Wildlife Code:

The owner or locator of private oyster beds under the foregoing provisions shall not be required to pay any rentals on such locations for a period of five years, or till such time as he shall begin to market or sell oysters from such location or bed. When such locator shall begin to sell or market oysters from such location, he shall pay the State three dollars per acre per annum and ten cents a barrel on oyster sales.

Failure to pay such rental by the first day of March of each year shall annul and be a forfeiture of his lease. And if oysters are not marketed or sold from such location within five years from the date of location, such location shall become void.

IMPORTANT: PLEASE NOTE CHANGE IN LAW RESULTING IN INCREASE.

**Appendix A. Conversion factors used for finfish and shellfish.**

Table A.1. Factors for converting finfish gutted weight to live weight.

Species	Conversion factors (divide by)	Reference
Atlantic croaker	0.85	TPWD unpublished data
Black drum	0.88	Harrington et al. (1979)
Florida pompano	0.85	NMFS (1980)
King mackerel	0.85	NMFS (1980)
Kingfish	0.85	TPWD unpublished data
Red drum	0.88	Harrington et al. (1979)
Sand seatrout	0.87	TPWD unpublished data
Shark	0.83	NMFS (1980)
Sheepshead	0.85	Harrington et al. (1979)
Snapper	0.85	TPWD unpublished data
Southern Flounder	0.93	Harrington et al. (1979)
Spanish mackerel	0.84	NMFS (1980)
Spotted seatrout	0.87	Harrington et al. (1979)
Swordfish	0.80	NMFS (1980)
Tilefish	0.91	NMFS (1980)
Yellowfin tuna	0.90	NMFS (1980)

Table A.2. Factors for converting finfish headed or collared weight to live weight.

Species	Conversion factors (divide by)	Reference
Black drum	0.61	TPWD unpublished data
Cobia	0.70	NMFS (1980)
Gafftopsail catfish	0.65	TPWD unpublished data
Grouper	0.70	NMFS (1980)
Snapper	0.61	TPWD unpublished data

Table A.3. Factors for converting blue crab to live weight and Eastern oyster to meat weight (TPWD unpublished data).

Species	Conversion factors (divide by)
Blue crab	6 lb/1 dozen
Eastern oyster (to oyster meat)	17.5 lb/barrel
Eastern oyster (to oyster meat)	8.75 lb/gallon
Live Eastern oyster	1 barrel = 3 bushels, baskets, or sacks

Table A.4. Factors for converting shrimp heads-on weight to heads-off weight (Chin 1960).

Species	Conversion factors (divide by)
Brown shrimp	1.61
Pink shrimp	1.60
Rock shrimp	1.67
Royal red shrimp	1.80
Sea bob	1.53
White shrimp	1.54

Appendix B. Weight (lb) and ex-vessel value (\$) of commercial finfish and shellfish landings from Texas bay systems during 1977-1985.

Table 8.1. Weight (lb) of each species landed commercially from Sabine Lake system during 1977-1985. Data based on MMPR and NMFS.

<sup>a</sup> License data are not additive across columns for any row since dealers may have multiple licenses.

<sup>b</sup> Large =Dealer located in a city with > 40,000 population;

Medium=Dealer located in a city with 7,500 to 40,000 population;

Small =Dealer located in a city with < 7,500 population.

<sup>c</sup> Beginning in fiscal year 1984, all retail fish dealer licenses were combined into one category.

Table H.2. Number of commercial saltwater fishermen licenses sold in Texas in each fiscal year from 1956 through 1985. (The sale of a license occurs when money is received in Austin).

Fiscal year	Tidal water	Red drum	Resident <sup>a</sup>	Non- resident <sup>b</sup>	General				Flinfish			
					Vessel (captain & crew)				Resident	Non- resident <sup>b</sup>	Menhaden only	Import
