TEXAS COMMERCIAL HARVEST STATISTICS  
1978-79

ABSTRACT

The Texas Parks and Wildlife Department (TPWD) in cooperation with the National Marine Fisheries Service (NMFS) conducts a continuing program to collect data on the commercially harvested finfish and shellfish from Texas bays and from Texas territorial waters of the Gulf of Mexico. Two types of data collection systems were used--Monthly Marine Products Reports (MMPR) and Individual Sales Transactions (IST).

Based on MMPR, compared with September-August 1977-78 data, during September-August 1978-79 red drum (Sciaenops ocellata) increased 5.2% in landings and 26.0% in value; spotted seatrout (Cynoscion nebulosus) increased 4.7% in landings and 34.8% in value. Black drum (Pogonias cromis) decreased 3.7% in landings but increased 7.1% in value. Flounder (Paralichthys lethostigma and P. albigutta) decreased 31.0% in landings and 11.9% in value. Red snapper (family Lutjanidae) decreased 28.6% in landings and 8.3% in value.

From 1977-78 to 1978-79, blue crab (Callinectes sapidus) decreased 9.3% in landings and 2.9% in value. Oyster meat landings decreased 45.4% in landings and 42.8% in value. Brown (Penaeus aztecus) and pink (P. duorarum) shrimp decreased 12.0% in landings but increased 29.5% in value. White shrimp (P. setiferus) decreased 1.7% in landings but increased 37.3% in value.

The price per pound paid to commercial fishermen for blue crabs remained stable from 1977-78 to 1978-79. Prices increased for red drum (20.0%), spotted seatrout (30.2%), flounder (26.2%), red snapper (28.7%), oyster meat (4.2%), brown and pink shrimp (46.3%) and white shrimp (57.0%). The price per pound for black drum decreased (17.8%) during the same period.

Based on IST, during 1 October 1978-30 September 1979, red drum landings from Texas bays and Texas Gulf waters totaled 348,864 kg--54.9% of the 1978-79 quota established by the TPWD Commission. Percent of individual quotas reached ranged from 14.9% for the Gulf of Mexico to 85.4% for Sabine Lake.

## INTRODUCTION

The Texas Parks and Wildlife Department (TPWD) in cooperation with the National Marine Fisheries Service (NMFS) conducts a continuing program to collect data on the commercially harvested finfish and shellfish from Texas bays and from Texas territorial waters of the Gulf of Mexico. The information is computer processed by the TPWD Data Processing Section in Austin, Texas and sent to NMFS in Washington, D. C. for printing in the Texas Landings bulletin.

During October 1978-September 1979 two reporting systems for commercially harvested seafood existed: 1) the Monthly Marine Products Report (MMPR) and 2) the Individual Sales Transactions (IST). Examples of these forms are found in Appendix A. Only those landings reported on MMPR are published in the Texas Landings bulletin.

The IST system was implemented in October 1977 as a result of the Red Drum Conservation Act (Texas Senate Bill 624) passed by the 65th Legislature. This Act reaffirmed the TPWD responsibility for collecting harvest and economic statistics concerning all fishes and set restrictions on both recreational and commercial harvests of red drum. Also, the Act established a special commercial red drum license to be sold only during the month of September. Finally, the Act called for the TPWD Commission to establish a commercial red drum quota for each Texas bay system and for the Gulf of Mexico. During 1 October 1978-30 September 1979, the coastwide red drum quota was set at 0.64 million kg (1.4 million lb). The TPWD Commission must close a particular bay (or the Gulf of Mexico) to commercial red drum fishing when that bay (or the Gulf) has reached 90% (based on the IST system) of its quota.

## MATERIALS AND METHODS

Personnel from the Division of Statistical-Market News, NMFS collected shrimp landings data. TPWD personnel collected landings data on fishes, crabs and oysters.

Seafood dealers must submit MMPR and/or IST to TPWD before the tenth day of each month; both reports cover the preceding month's transactions. In the past TPWD personnel visited area wholesale seafood dealers each month and collected MMPR and IST; however, beginning on 1 October 1979, these forms must be mailed directly to TPWD. Seafood dealers were informed of this procedural change via letter and personal contact during September 1979.

MMPR and IST were checked by TPWD personnel for accuracy and completeness. Finfish landings were converted from whole (gutted and gilled) to round weights, blue crabs (Callinectes sapidus) to live weight and oysters (Crassostrea virginica) to meat weight (4.0 kg or 8.75 lb per gallon). Heads-off shrimp weights were converted to heads-on weights by multiplying by the following factors: 1.61 for brown shrimp (Penaeus aztecus), 1.60 for pink shrimp (P. duorarum), 1.54 for white shrimp (P. setiferus), 1.80

for royal red shrimp (Hymenopenaeus robustus) and 1.53 for seabob (Xiphopenaeus kreyeri). "Other" finfishes included minor or incidental catches of cobia (Rachycentron canarium); Atlantic croaker (Micropogon undulatus); grouper--including yellowedge grouper (Epinephelus flavolimbatus), jewfish (E. itajara), Warsaw grouper (E. nigritus), Nassau grouper (E. striatus), black grouper (Mycteropera bonaci), yellowmouth grouper (M. interstitialis), scamp (M. phenax) and yellowfin grouper (M. venenosa); whiting--including southern kingfish (Menticirrhus americanus) and Gulf kingfish (M. littoralis); mullet (Mugil cephalus); pompano (Trachinotus carolinus); gafftopsail catfish (Bagre marinus) and unclassified food fish. "Other" shrimp included catches of royal red shrimp, seabob and rock shrimp (Sicyonia brevirostris).

## RESULTS

### MMPR

Red drum (Sciaenops ocellata) landings increased 18,600 kg (5.2%) from 1977-78 to 1978-79 with an increase in value of \$132,800 (26.0%) (Table 1). During the same period spotted seatrout (Cynoscion nebulosus) landings increased 23,800 kg (4.7%) with an increase in value of \$245,300 (34.8%). Black drum (Pogonias cromis) landings decreased by 28,300 kg (3.7%) but increased in value by \$40,900 (7.1%). Flounder (includes southern flounder, Paralichthys lethostigma and Gulf flounder, P. albigutta) decreased 41,500 kg (31.0%) in landings and \$21,300 (11.9%) in value. Sheepshead (Archosargus probatocephalus) increased 38,700 (28.1%) in landings and \$13,000 (36.7%) in value. Red snapper (includes red snapper, Lutjanus campechanus, gray snapper, L. griseus, dog snapper, L. jocu, yellowtail snapper, Ocyurus chrysurus and vermillion snapper, Rhomboplites aurorubens) decreased 51,900 kg (28.6%) in landings and \$31,300 (8.3%) in value. "Other" finfishes increased 125,500 kg (296.2%) in landings and \$50,700 (269.7%) in value.

From 1977-78 to 1978-79, blue crab landings decreased 337,500 kg (9.3%) in landings and \$58,400 (2.9%) in value.

Oyster meat landings decreased 459,300 kg (45.4%) from 1977-78 to 1978-79 with a decrease in value of \$1,148,200 (42.8%).

Although all shrimp landings decreased from 1977-78 to 1978-79, values generally increased. Brown and pink shrimp decreased 3,551,900 kg (12.0%) in landings but increased \$28,322,000 (29.5%) in value. White shrimp decreased 160,900 kg (1.7%) in landings but increased \$11,076,600 (37.3%) in value. "Other" shrimp decreased 64,800 kg (46.4%) and \$300,900 (88.6%) in value.

Prices paid to commercial fishermen for blue crabs and "other" finfishes remained relatively stable from 1977-78 to 1978-79 (Table 2). During the same period, the average price increased 20.0% for red drum 30.2% for spotted seatrout, 26.2% for flounder, 28.7% for red snapper, 4.2% for oyster meat, 46.3% for brown and pink shrimp and 57.0% for white shrimp. The average price decreased 17.8% for black drum and 78.4% for "other" shrimp.

Monthly summaries of bay and Gulf landings and values by species are presented in Appendix B, C, D and E.

#### IST Red Drum Landings

During 1 October 1978-30 September 1979, red drum landings totaled 348,864 kg (769,101 lb)--54.9% of the coastwide 0.64 million kg (1.4 million lb) quota set by the TPWD Commission (Table 3). Percent of individual quotas reached ranged from 14.9% for the Gulf of Mexico to 85.4% for Sabine Lake.

#### DISCUSSION

Harvest information has been distributed to TPWD personnel, NMFS, county extension agents, industry, educational institutions and other interested persons for use in biological, ecological, economic, socio-logical, statistical and historical studies.

It should be pointed out that the Gulf of Mexico shrimp landings at Texas ports as reported to TPWD by the Division of Statistics-Market News, Galveston and listed in Texas Landings may include the harvest of shrimp from the waters of Florida, Louisiana and Mexico as well as those of Texas. In their publication Gulf Coast Shrimp Data, NMFS reports shrimp harvests from "offshore grid areas"; however, the most recent publication of this bulletin occurred in 1976. Once this publication is brought up to date, the Texas Landings will be revised to reflect only those shrimp harvested in Gulf waters off Texas.

In a letter dated 24 September 1979 the Director of the Southeast Fisheries Center, NMFS stated that NMFS will discontinue printing Texas Landings after December 1979. However, NMFS commercial fisheries data collection will continue and the information will remain available in the form of computer printouts on request from the Chief of NMFS' Technical and Information Management Service, Miami, Florida.

The decreases in shrimp landings probably reflect the deleterious effects on shrimp populations of excessive flooding and subsequent fresh-water runoff into the bays. The large decline in oyster landings was the result of TPWD's decision to close Galveston Bay to oystering during the 1978-79 season. This decision came following three years of poor oyster spat set which resulted in only a few large oysters.

A continuing problem with the MMPR and IST systems is the failure to report seafood landings by commercial and sport fishermen who sell directly to consumers and to retail outlets as well as the failure of some wholesale seafood dealers to report all or part of their seafood purchases. Such practices contribute to the inability of TPWD to obtain accurate data on commercially harvested seafood. In order to reduce non-reporting, TPWD personnel have personally contacted fishermen, seafood truckers, retail and wholesale outlets and others who buy and sell fish to urge them to submit MMPR and IST. In addition, TPWD personnel have begun to submit monthly reports to TPWD law enforcement personnel concerning the business

names and addresses of wholesale seafood dealers who fail to submit MMPR and/or IST. Law enforcement personnel are then able to contact such businesses and compel them to submit these reports.

At the present time, sales of blue crabs, oysters and shrimp are required only on the MMPR, not on the IST. Recently there has been some discussion about eliminating the MMPR for finfish and using only the IST. It may be possible in the future to include crabs, oysters and shrimp on IST, eliminating the MMPR altogether.

Table 1. Texas commercial finfish and shellfish landings for fiscal years 1977-78 and 1978-79--  
September-August (kg, lb and value in dollars x 1000). Data based on MMPR.

Species	1977-78		1978-79		% Difference
