ABSTRACT

Trends in relative abundance and size of blue crabs (Callinectes sapidus Rathbun) in Texas bay systems were monitored during September 1979-August 1981 utilizing bag seines and trawls. Bag seine samples were taken in seven bay systems (Galveston, Matagorda, San Antonio, Aransas and Corpus Christi Bays and the upper and lower Laguna Madre), while trawl samples were taken in four bay systems (Galveston, Matagorda, San Antonio and Aransas Bays).

Highest annual catch rates with bag seines (173.38/ha) occurred in the lower Laguna Madre. Coastwide trends in annual abundance showed no apparent pattern of increasing or decreasing abundance. Monthly and annual changes in mean sizes for blue crabs were not apparent.

Highest annual catch rates with trawls (14.9/h) occurred in Aransas Bay. Coastwide trends in annual catch rates indicated a decline from 1978-79 through 1980-81. Monthly and annual changes in mean sizes for blue crabs were not apparent.

INTRODUCTION

The blue crab, (Callinectes sapidus Rathbun), is found along the entire Texas coast and supports the third largest commercial fishery in the State following shrimp and oysters. From 1977-1981, reported annual landings of hardshell blue crabs averaged 3.6 million kg and were valued at \$2.0 million dockside (Hamilton 1982).

The life history of the blue crab in Texas has been investigated primarily by Daugherty (1952) and More (1969). Blue crabs usually spawn during spring and summer in the Gulf of Mexico or lower bay regions where salinities are greater than 20 o/oo. Young crabs migrate toward estuarine areas where salinities are usually less than 20 o/oo. There they grow and reach maturity in about one year. After mating, female blue crabs migrate to the Gulf of Mexico or lower bay regions to spawn. Males remain in the upper bay areas.

Reported landings of hardshell blue crabs have shown wide and sudden fluctuations (More 1969, Pearson 1948 and Tagatz 1965) including a 67% decline in Texas landings from 1962-63. This decline and the lack of knowledge concerning these fluctuations motivated the Texas Parks and Wildlife Department (TPWD) to conduct the blue crab investigation from 1962-1967 (More 1969).

Since blue crab production almost doubled from 1.9 to 3.7 million kg between 1968 and 1977, the importance of monitoring the blue crab populations for management purposes again became evident. In 1977, TPWD began a program designed to monitor juvenile and adult blue crab abundance and to develop long-term trends in size distributions and blue crab availability.

The goal of the blue crab program is to manage the resource to provide for optimum sustained harvest by all user groups. In order to accomplish this goal, TPWD monitored trends in catch per effort (CPE) of blue crabs caught in bag seines and trawls. Annual and monthly catch rates and mean widths were summarized with data from previous years. This report is the summarization of the data collected during the project years September 1979-August 1980 and September 1980-August 1981. Data collected during September-December 1981 are summarized in Appendix D. These data are not included in the calculations presented in this report in order to maintain consistency between the years. Any difference in this report compared to previous reports is due to updating of the data base and the most recent report should be considered the most accurate.

MATERIALS AND METHODS

Bag Seines

Each bag seine was 18.3 m long and 1.8 m deep with 19-mm stretched nylon multifilament mesh in the lateral wings and 13-mm stretched nylon multifilament mesh in the central bag.

From September 1979-August 1981, samples were collected with bag seines in the Galveston, Matagorda, San Antonio, Aransas and Corpus Christi Bays and the upper and lower Laguna Madre (Figures 1-9; Appendix A). Six different shoreline stations were sampled each month in each bay system. Stations were randomly selected from a list of ≤ 100 sample stations compiled for each bay system (Hegen 1982). Each station on the list was at least 1.6 km of continuous shoreline from any other bag seine station.

Three different stations were sampled with bag seines during each of the first two and last two fullest weeks of each month. Each sampling week extended from sunrise Monday through sunset of the following Sunday. Stations were sampled only during daylight hours.

A bag seine sample was collected by pulling an extended seine parallel or perpendicular to shore for a distance of no less than 15.2 m and no more than 30.5 m. The rectangular surface area sampled was estimated using the distance pulled and the length of extension of the bag seine.

No more than 19 randomly selected blue crabs were measured from each sample. Blue crabs were measured to the nearest 1 mm from lateral spine tip to lateral spine tip.

Monthly abundance values (No./ha) were calculated using the ratio estimator:

$$\frac{N}{H} \quad \begin{aligned} N &= \text{total number of individuals caught} \\ H &= \text{total number of hectares covered} \end{aligned}$$

Values were reported to the nearest 0.01 individual/ha. Size (nearest 1 mm as described above) was calculated using the ratio estimator:

$$\frac{\sum_{i=1}^n L_i}{n} \quad \begin{aligned} L_i &= \text{individual sizes} \\ n &= \text{number of individuals measured} \end{aligned}$$

Coastwide abundance and size values were calculated by weighting individual bay system values by the total amount of shoreline present in the respective system (Matlock and Ferguson 1982). Coefficient of variation values for blue crab catch rates from bag seines ranged from 22% to 202%. Coefficient of variation values for blue crab mean widths ranged from 0 to 83%.

Trawls

During September 1979-August 1981, samples were collected with 6.1-m trawls at permanent stations in the Galveston (15 stations), Matagorda (9 stations), San Antonio (10 stations) and Aransas (11 stations) bay systems (Figures 2-6; Appendix B). These stations were sampled once monthly during February-May and twice monthly during June-December in all bay systems except Matagorda where they were sampled once monthly during September-August. No samples were collected in January.

Trawls were 6.1-m wide at the mouth measured along the cork line between the rear margins of the trawl doors. The net was constructed of 38-mm stretched mesh throughout. The mesh was #9 (Nylon Net Co.) nylon multifilament thread. Trawl doors measured 1.2-m long and 0.6-m high.

Each month was divided into two sample periods; 1st-15th and 16th-end of month. When stations were sampled twice during a month, they were sampled during these two periods. However, when stations were sampled only once each month, they were sampled as close to the middle of the month as possible. All stations were sampled only during daylight hours.

Trawls were towed using available TPWD boats. Trawls were towed either in a circle or a line for a period of 15 minutes for each sample.

No more than 35 randomly selected blue crabs were measured from each sample. Blue crabs were measured to the nearest 1 mm from lateral spine tip to lateral spine tip. Catch rate estimates (No./tow) were calculated identical to the abundance estimates of the bag seines, except total number of tows (to the nearest 0.1) was used instead of total ha covered. Size was also calculated identical to mean widths of crabs from bag seines. Coastwide catch rates and size values were calculated by weighting individual bay system values by the total amount of area present in the respective bay system (Matlock and Ferguson 1982). Coefficient of variation values for blue crab catch rates ranged from 15 to 94%. Coefficient of variation values for blue crab mean widths ranged from 2 to 82%.

The randomly selected stations for the bag seines could not always be sampled. If a preselected station could not be sampled because of unsafe weather conditions, an alternate randomly selected station or an alternate day was substituted.

Crab data from bag seines were recorded on standard data forms. These data were key punched, placed on magnetic tape and summarized by computer at the Data Processing Section, TPWD, Austin. Crab data from trawls were recorded on standard data forms. These data were compiled and summarized by the author.

Water temperature (C) and salinity (o/oo) were measured at the time of each sample. Monthly means of these parameters are summarized in Appendix C.

RESULTS

Bag Seines (Annual Trends)

Coastwide annual mean catch rates in bag seines ranged from 75.46/ha to 88.67/ha during 1978-1981 with no discernible pattern of increasing or decreasing abundance (Table 1). Mean catch rates in individual bay systems ranged from 21.48/ha in Matagorda Bay to 173.38/ha in lower Laguna Madre. Coastwide annual mean widths ranged from 44 mm in 1980-81

to 55 mm in 1979-80. Annual mean widths within individual bay systems ranged from 36 mm in San Antonio Bay to 66 mm in Matagorda Bay. Mean widths fluctuated without a discernible pattern.

Trawls (Annual Trends)

Coastwide annual mean catch rates in trawls declined from 11.3/tow in 1978-79 to 5.5/tow in 1980-81 (Table 2). The same pattern of declining catch rates was indicated in each bay system sampled. Catch rates were generally higher (10.0-14.9/tow) in 1978-79 than in 1980-1981 (2.4-9.5/tow). Coastwide annual mean widths ranged from 82 mm in 1978-79 to 91 mm in 1980-81. Annual mean widths within individual bay systems ranged from 63 mm in San Antonio Bay to 97 mm in Galveston Bay. Mean widths fluctuated without discernible pattern.

Bag Seines (Monthly Trends)

Coastwide mean monthly catch rates during 1979-80 were generally higher (65.10-214.12/ha) during January-June than the remainder of the year when catch rates ranged from 4.00-68.70/ha (Table 3). This period of abundance was not consistent in each bay system. Monthly mean catch rates within individual bay systems ranged from 0.00/ha in Galveston and Matagorda Bays to 762.50/ha in lower Laguna Madre. Coastwide mean widths ranged from 27-80 mm. Mean widths in individual bay systems ranged from 16 mm in upper Laguna Madre to 175 mm in San Antonio Bay and showed no apparent monthly trends.

In 1980-81 coastwide catch rates were highest (152.34-204.38/ha) during March-April and lowest (19.28-36.64/ha) during December-February (Table 4). This general pattern was apparent in each bay system. Monthly mean catch rates within individual bay systems ranged from 0.00/ha in Galveston, Matagorda, Aransas and Corpus Christi Bays to 680.00/ha in lower Laguna Madre. Coastwide mean widths ranged from 32 mm to 77 mm. Monthly mean widths in individual bay systems ranged from 11 mm in San Antonio Bay to 119 mm in Aransas Bay and showed no apparent monthly trends.

Trawls (Monthly Trends)

Coastwide mean monthly catch rates during 1979-80 were generally higher (10.0-25.4/tow) during March-June than during the remainder of the year (1.8-7.4/tow) (Table 5). This general pattern was apparent in each bay system. Monthly mean catch rates within individual bay systems ranged from 0.3/tow in Matagorda Bay to 96.3/tow in San Antonio Bay. Coastwide mean widths ranged from 72 mm to 109 mm. Mean widths in individual bay systems ranged from 33 mm in Aransas Bay to 153 mm in Matagorda Bay and showed no apparent monthly trends.

In 1980-81 coastwide catch rates were highest (8.9-13.7/tow) during April-June and were lowest (0.6-0.8/tow) during November-December (Table 6). This general pattern was apparent in each bay system. Monthly mean catch rates within individual bay systems ranged from 0.0/tow in Matagorda Bay to 19.7/tow in San Antonio Bay. Coastwide mean widths ranged from 56 mm to 115 mm. Monthly mean widths in individual bay

systems ranged from 32 mm in Aransas Bay to 138 mm in Galveston Bay and showed no apparent monthly trends.

^a Weighted by amount of area in each bay system.

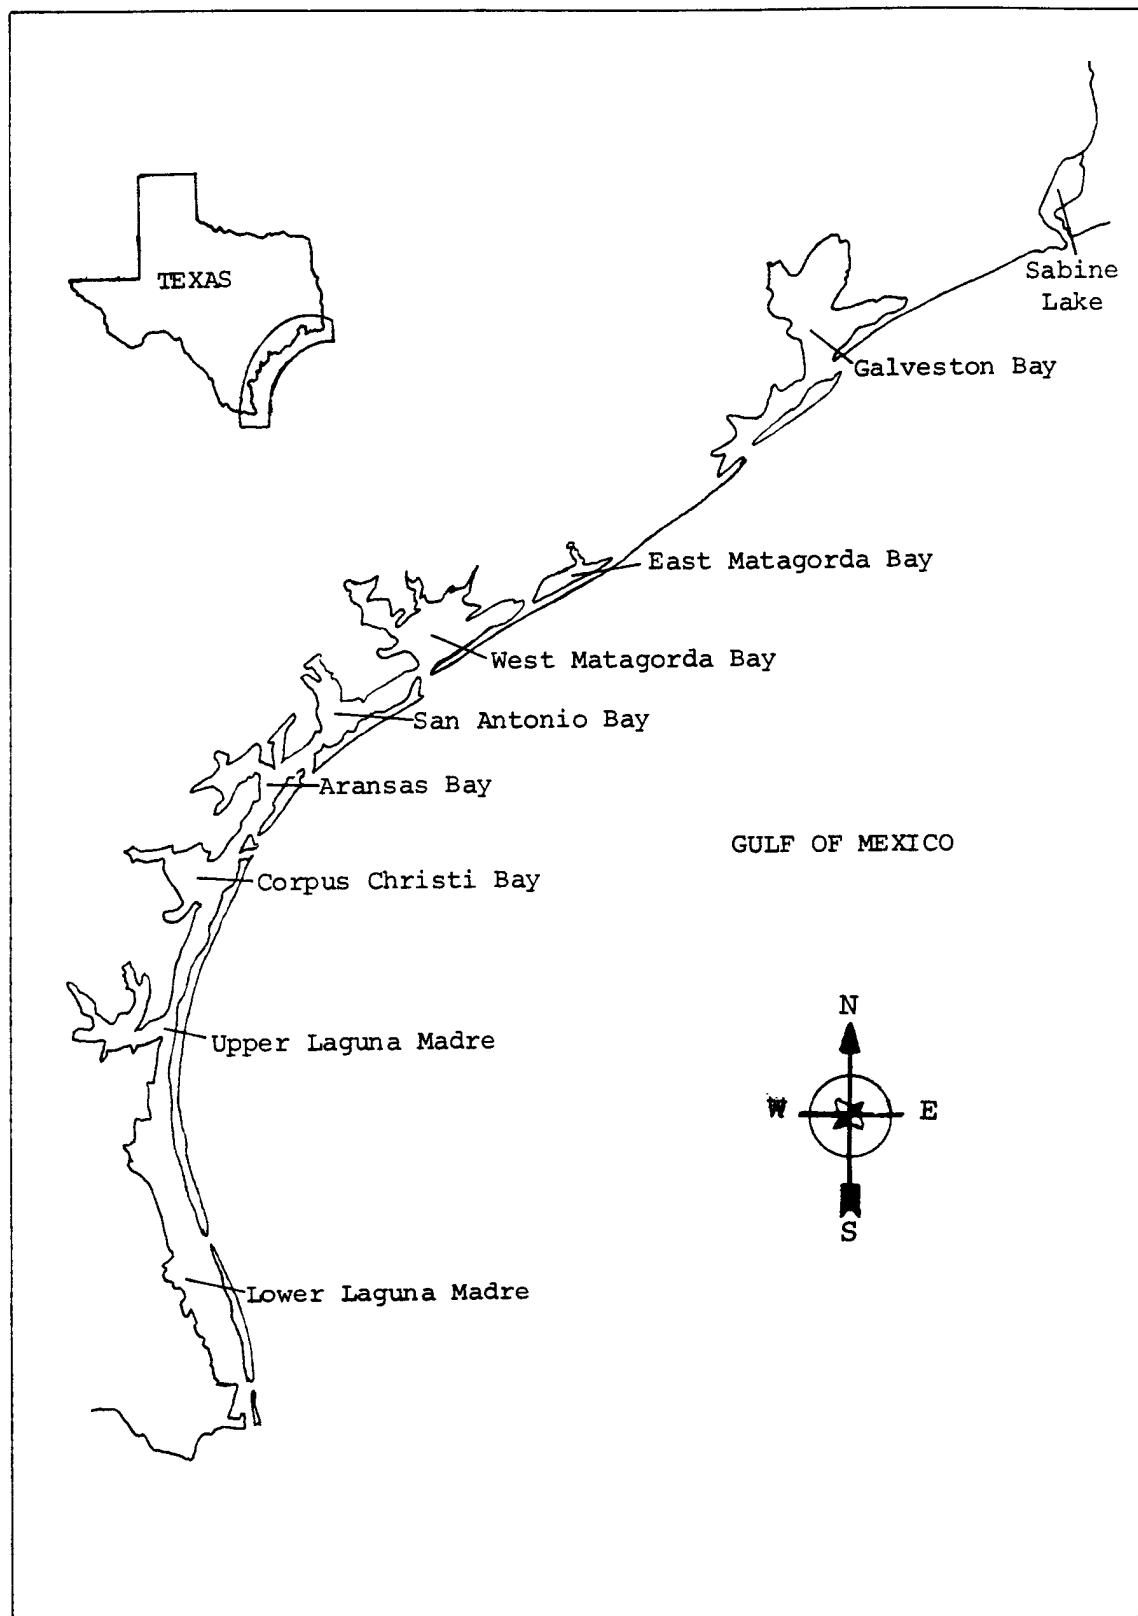

Figure 1. Map of the Texas coast indicating bay system locations.

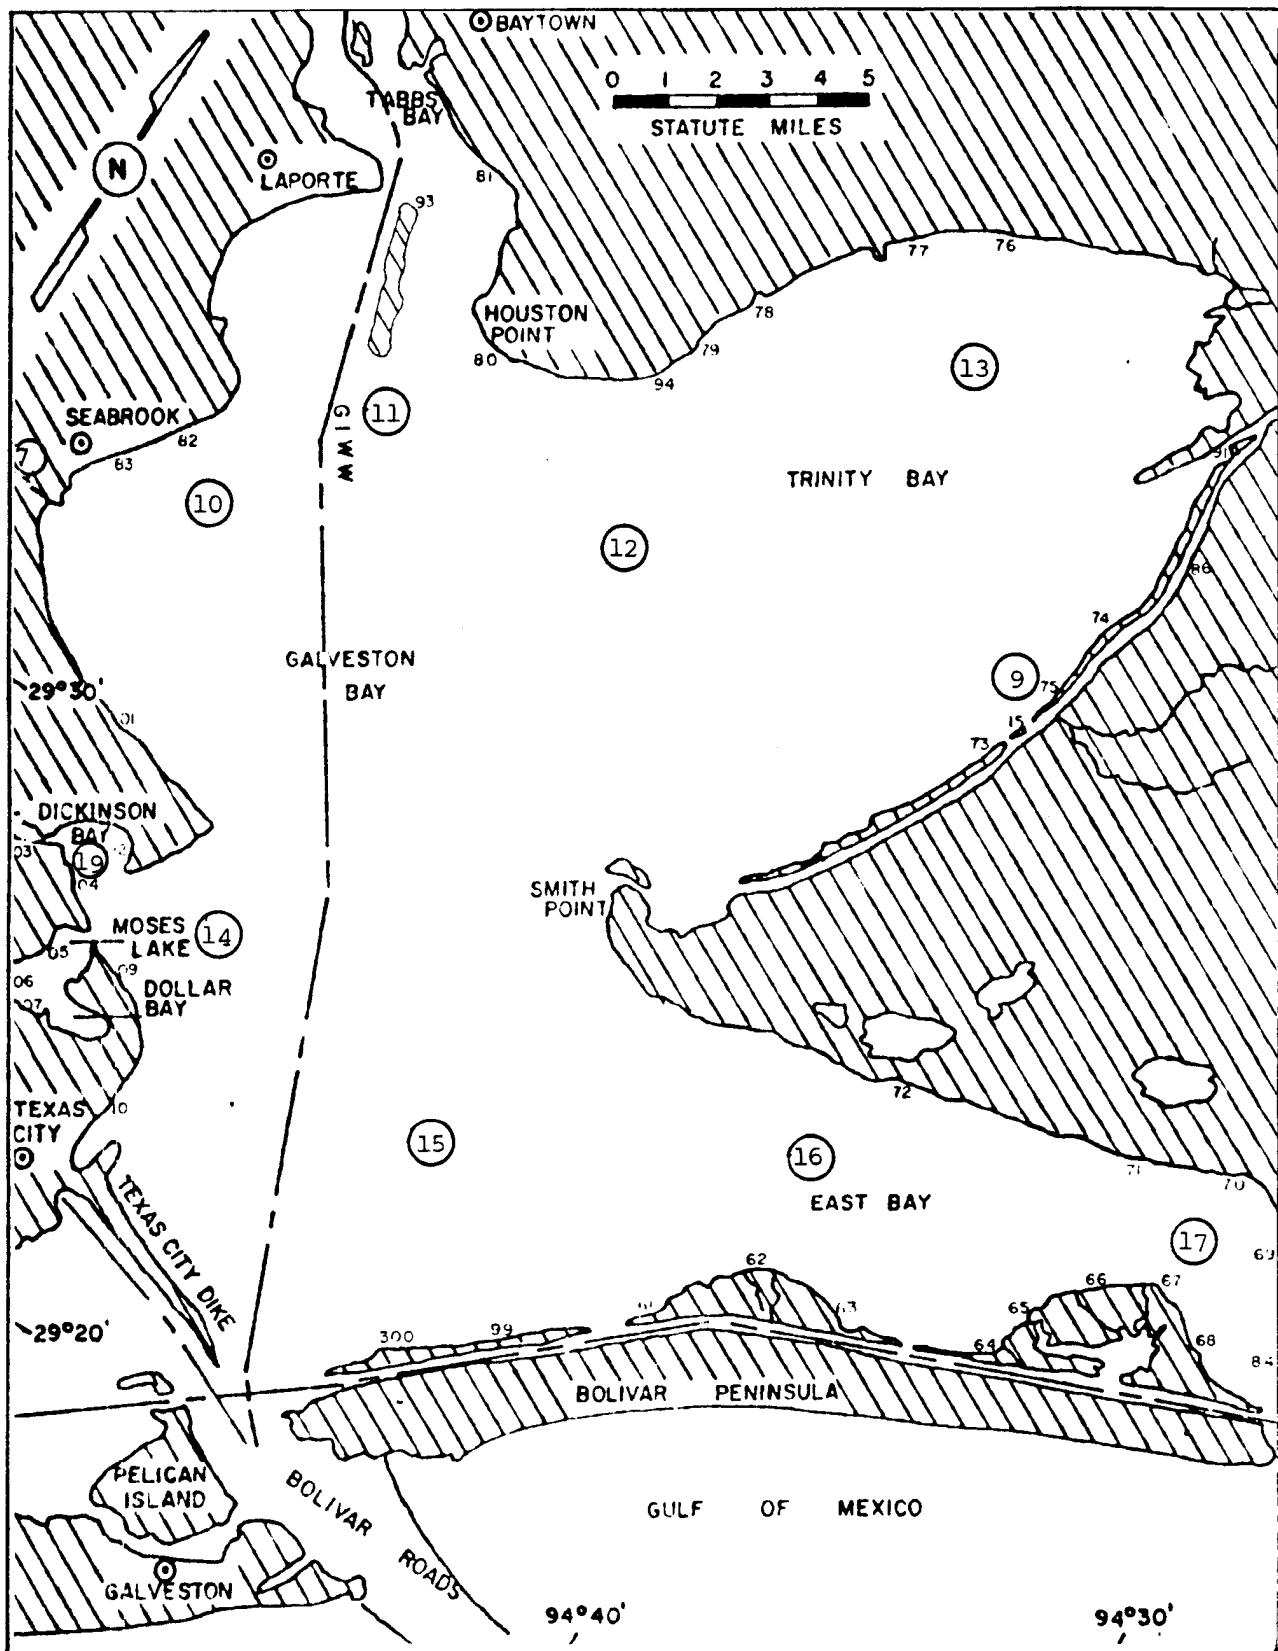

Figure 2. Map of the Galveston Bay system indicating 6.1-m trawl station (circled numbers) and 18.3-m bag seine station locations, September 1979-August 1981.

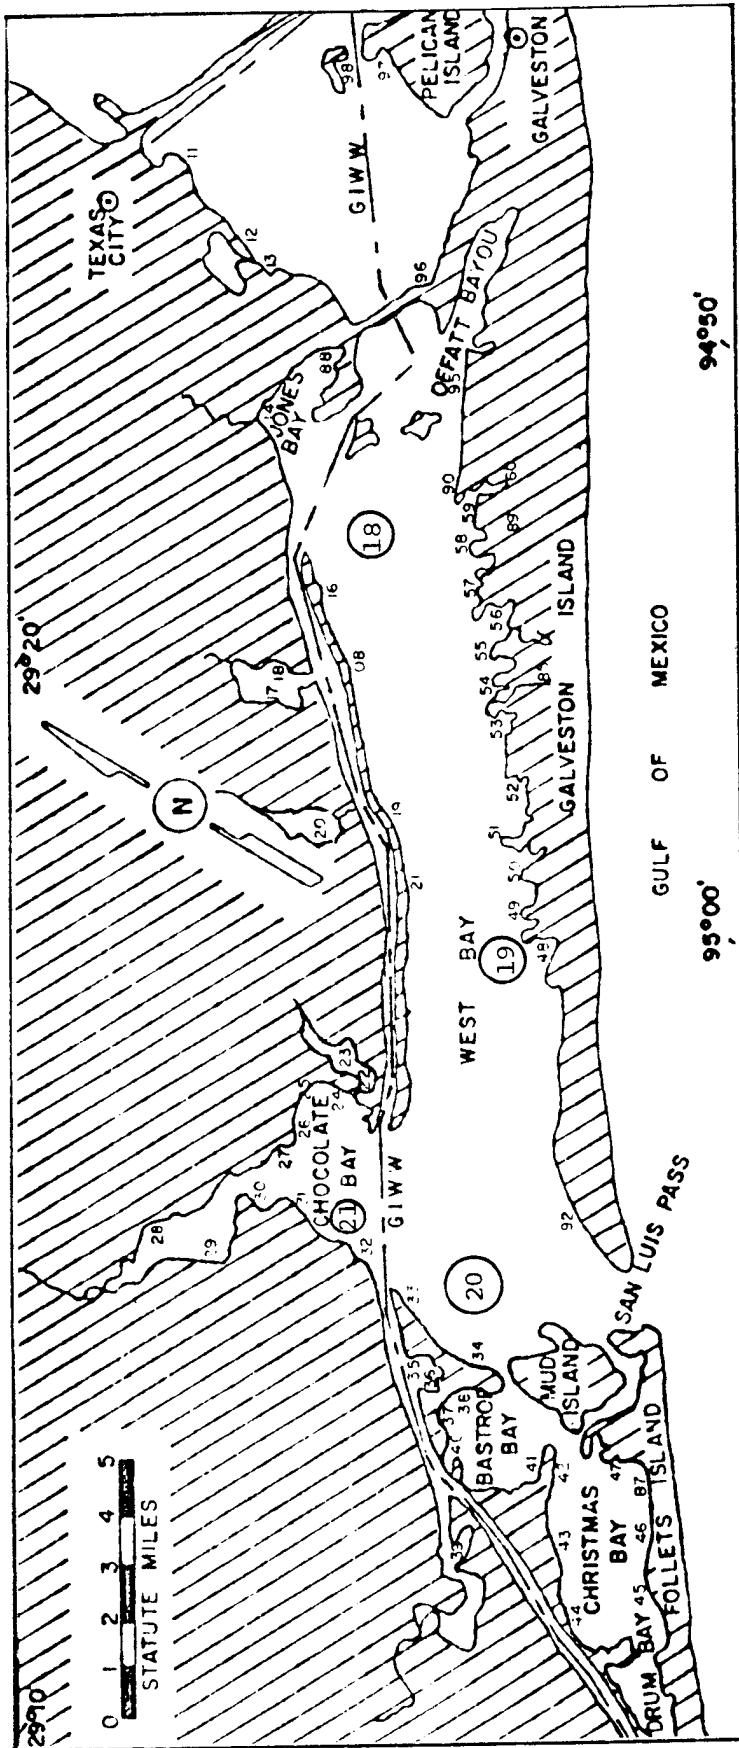

Figure 3. Map of the Galveston Bay system indicating 6.1-m trawl station (circled numbers) and 18.3-m bag seine station locations, September 1979-August 1981.

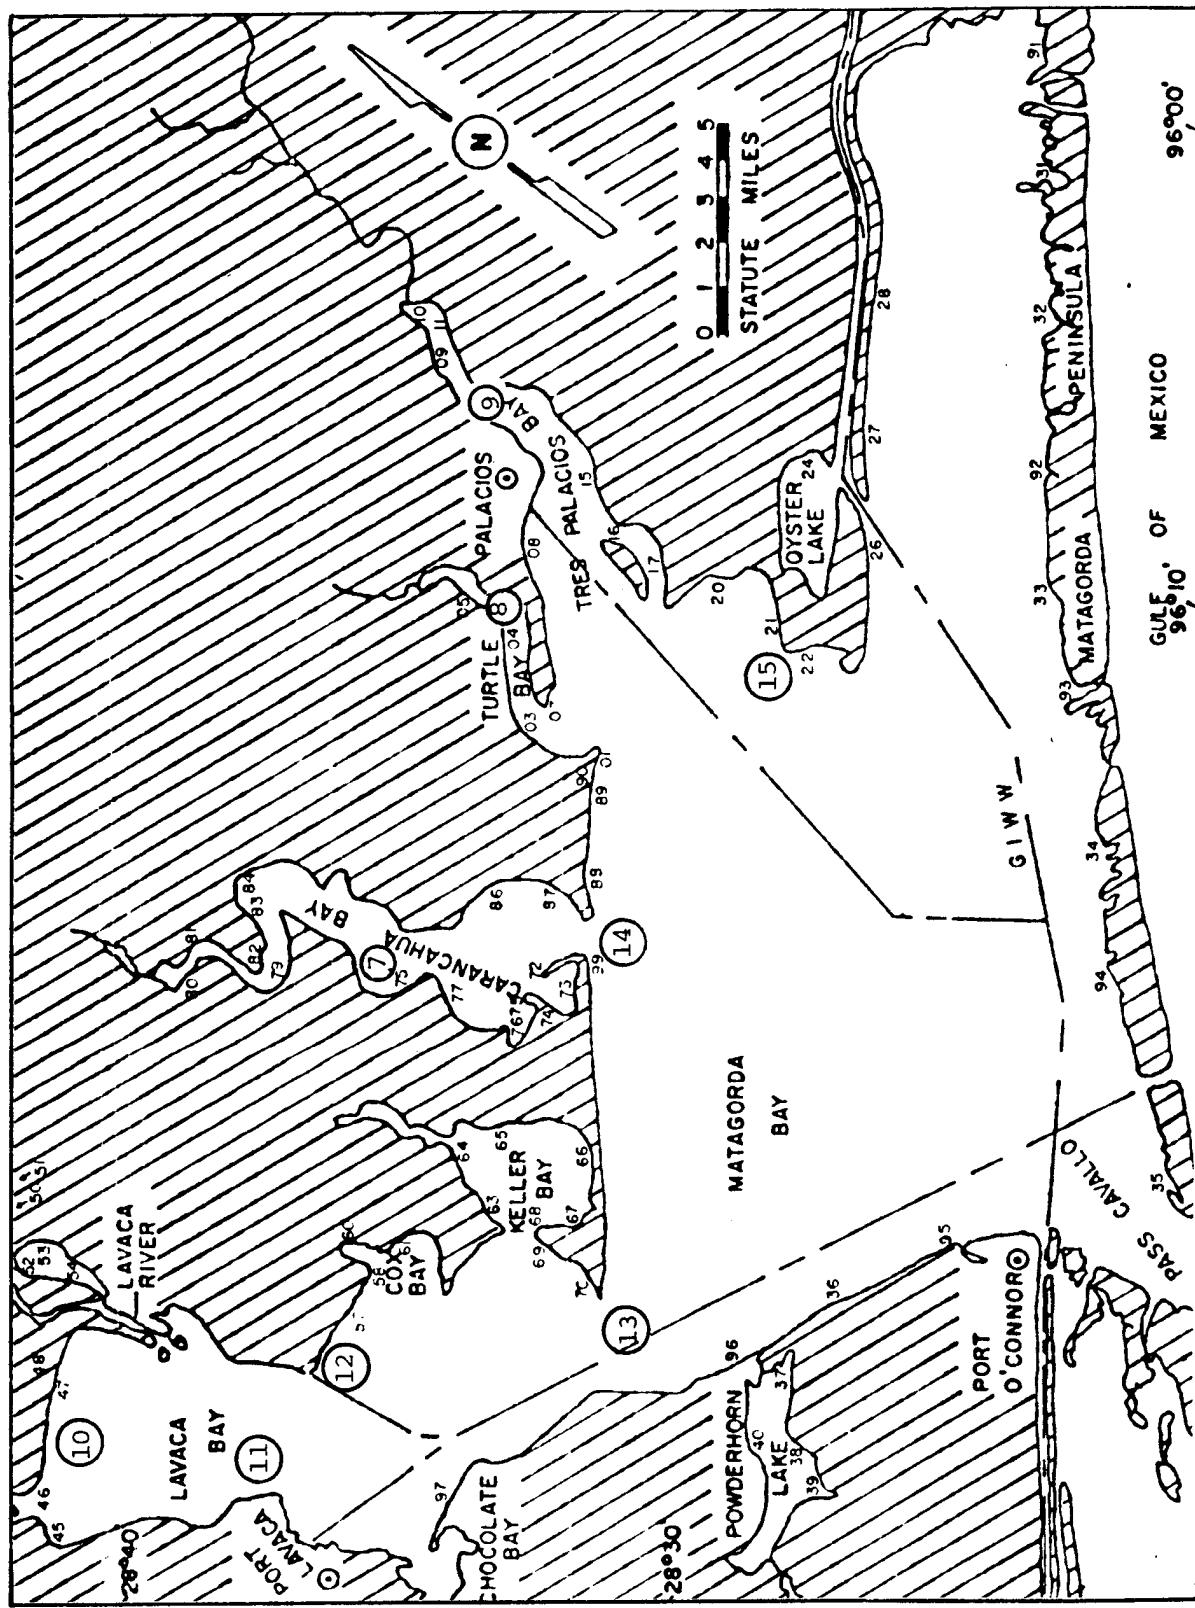

Figure 4. Map of the Matagorda Bay system indicating 6.1-m trawl station (circled numbers) and 18.3-m bag seine station locations, September 1979–August 1981.

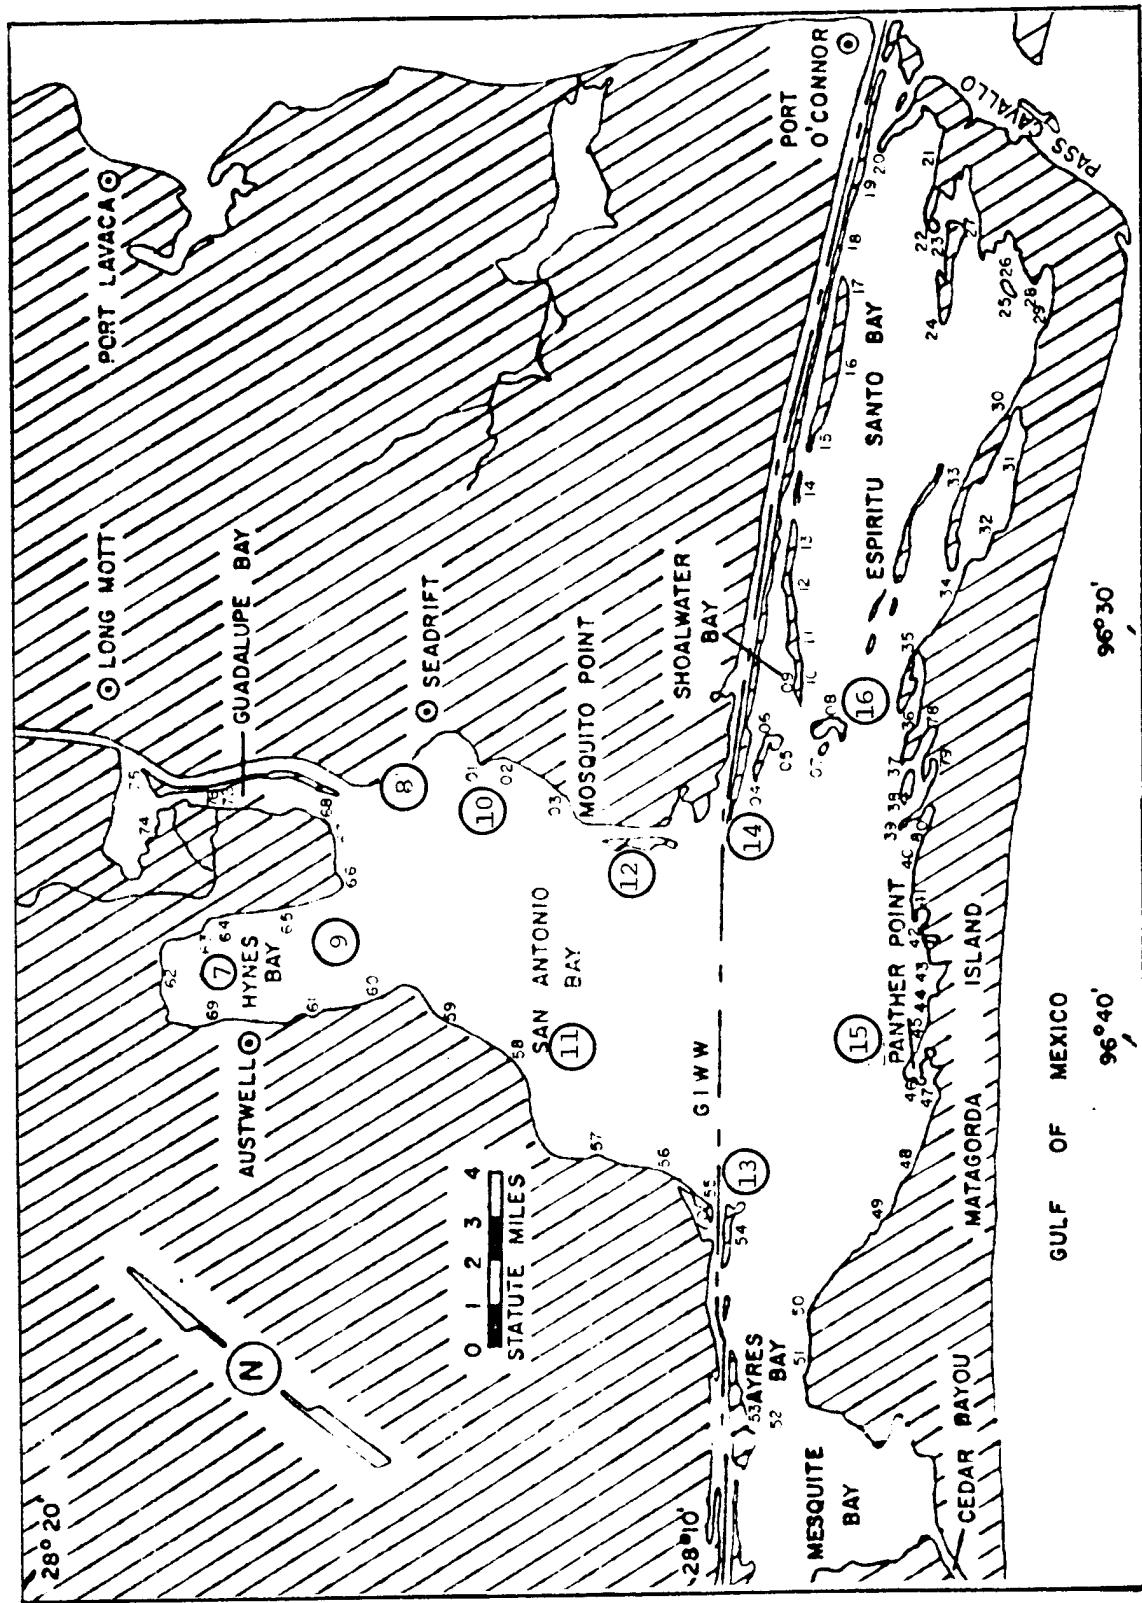

Figure 5. Map of the San Antonio Bay system indicating 6.1-m trawl station (circled numbers) and 18.3-m bag seine station locations, September 1979-August 1981.

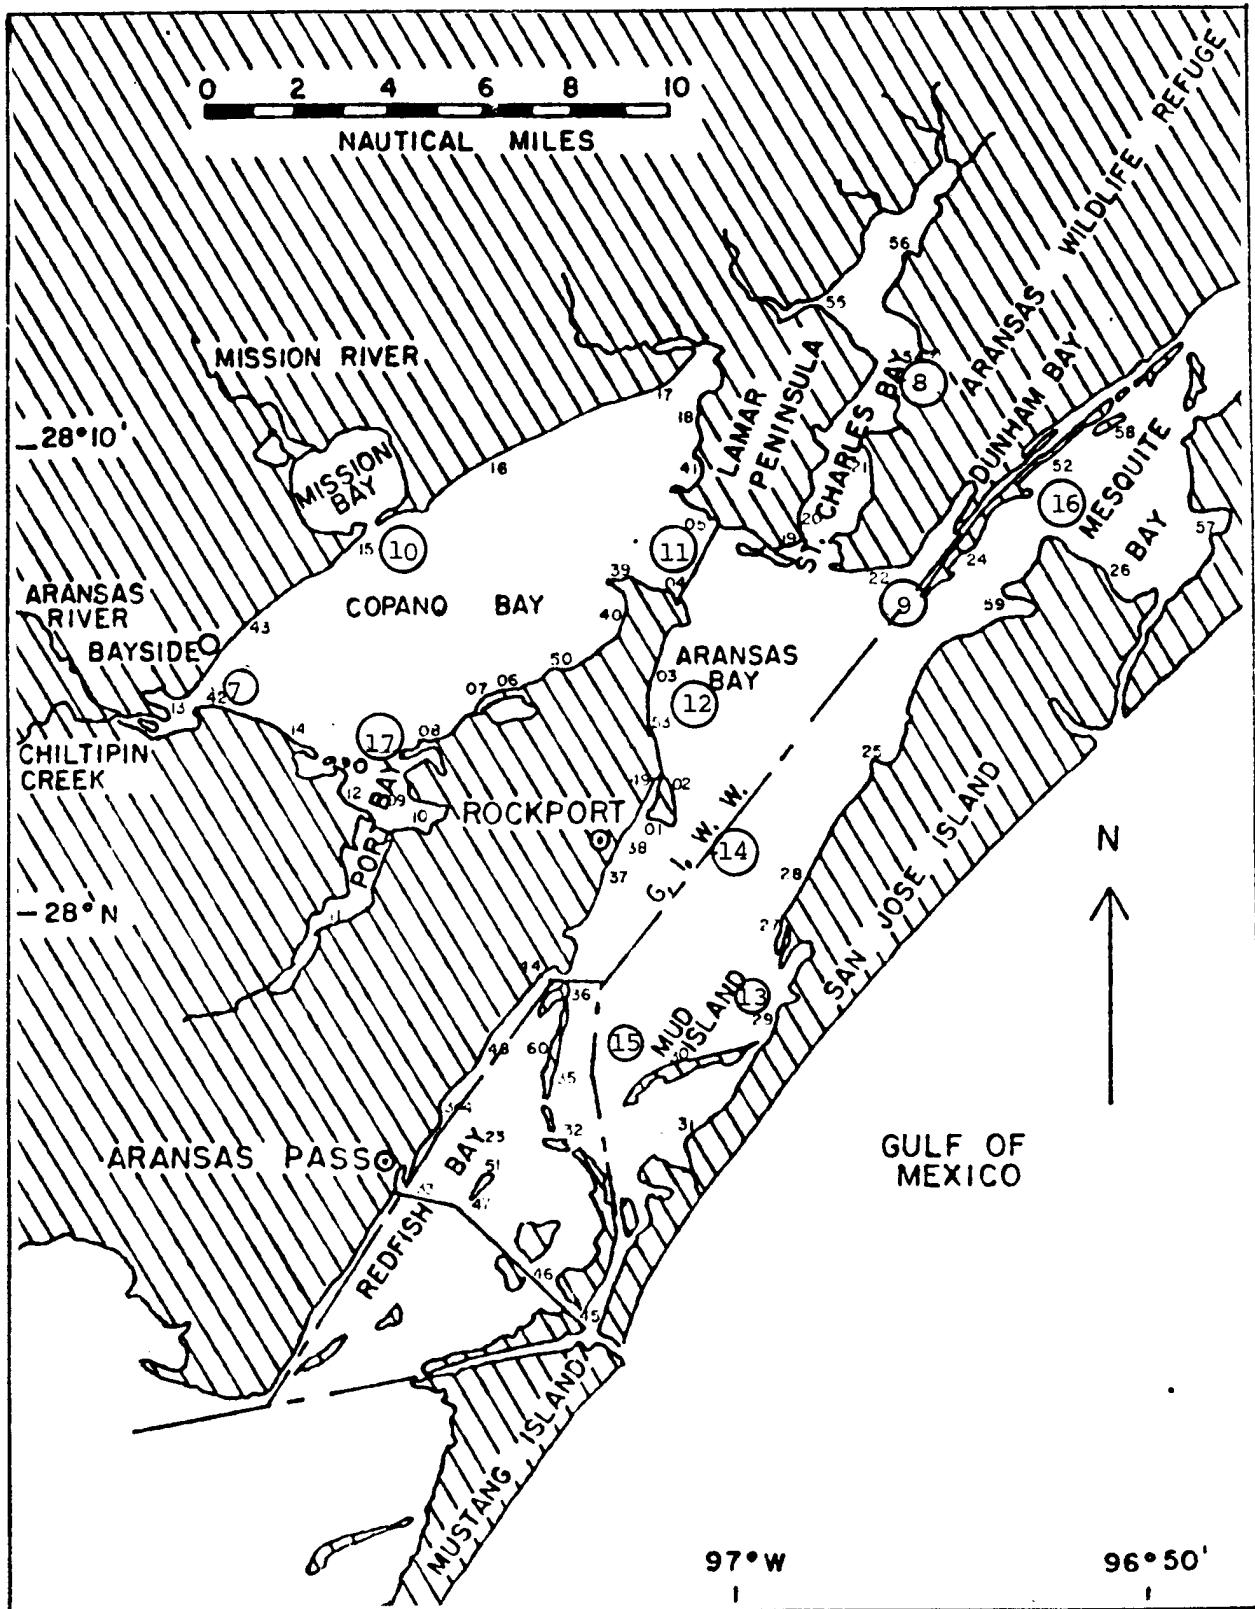

Figure 6. Map of the Aransas Bay system indicating 6.1-m trawl station (circled numbers) and 18.3-m bag seine station locations, September 1979-August 1981.

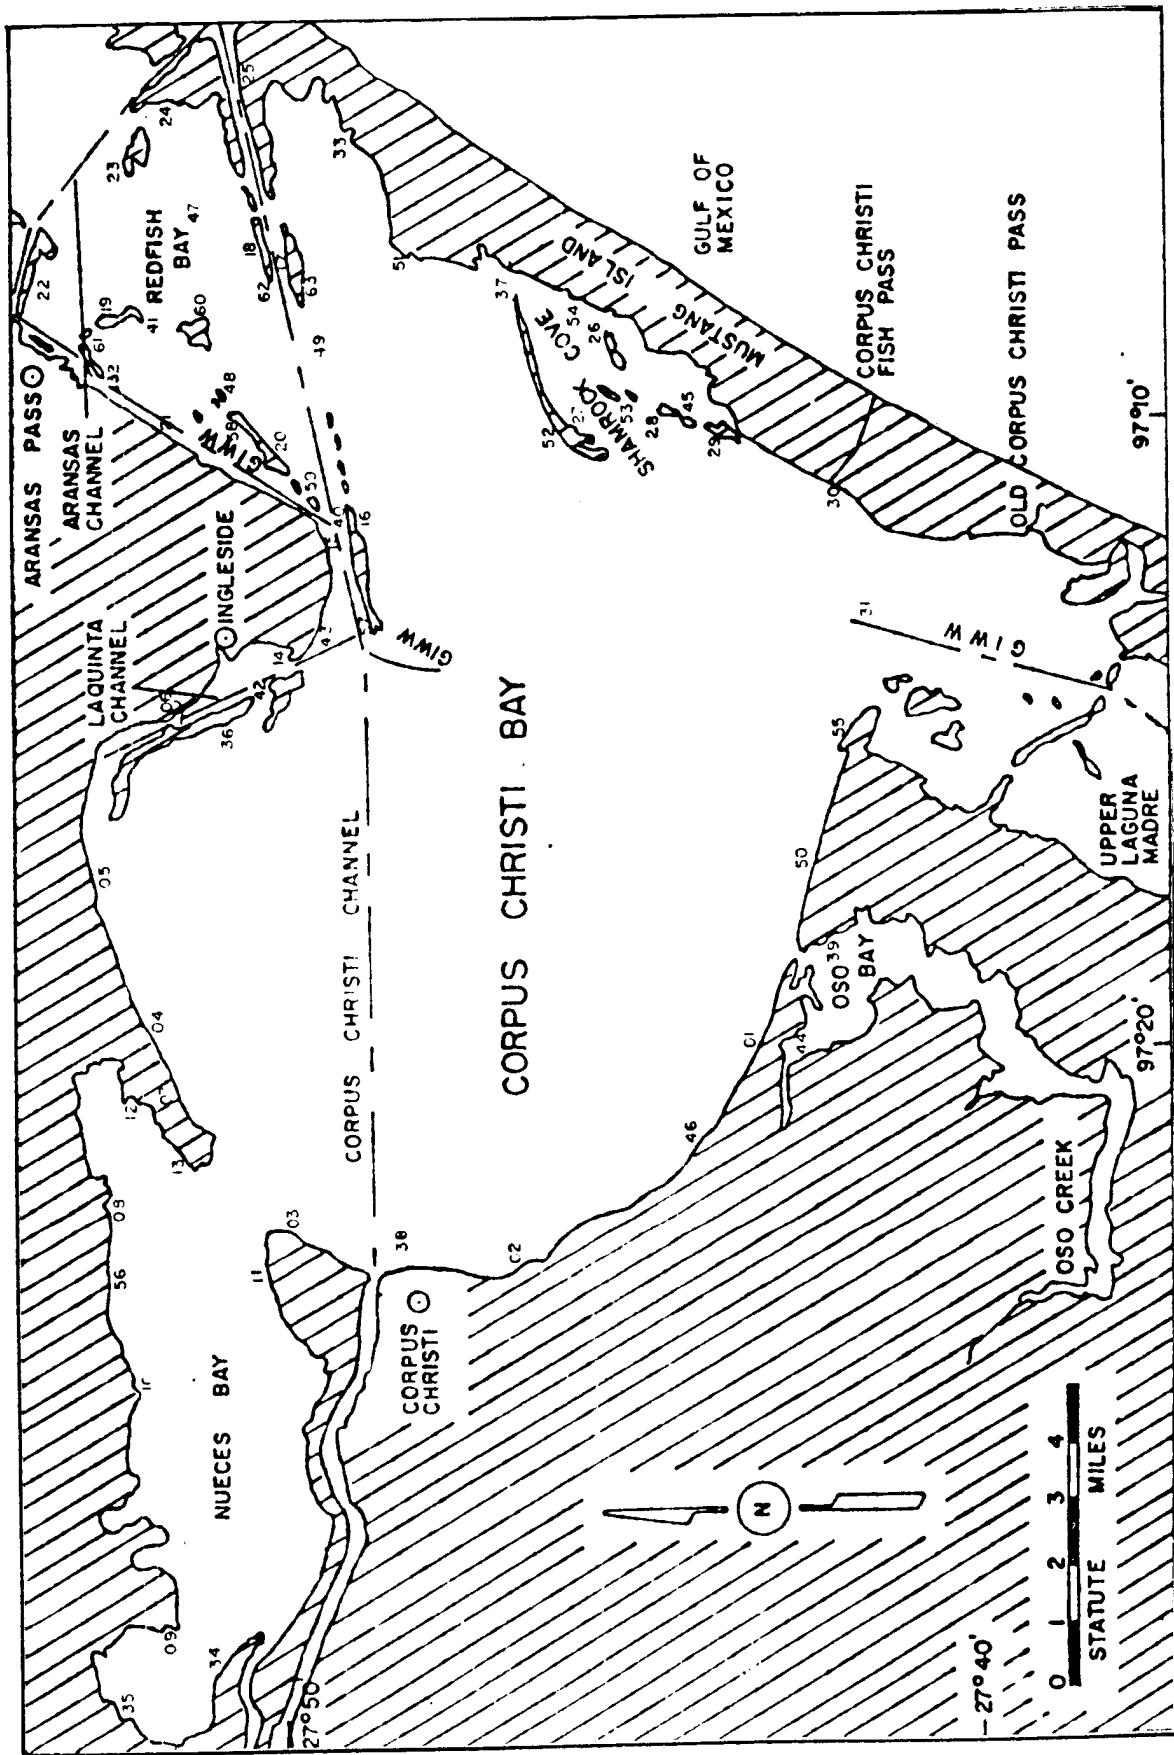

Figure 7. Map of the Corpus Christi Bay system indicating 18.3-m bag seine station locations, September 1979-August 1981.

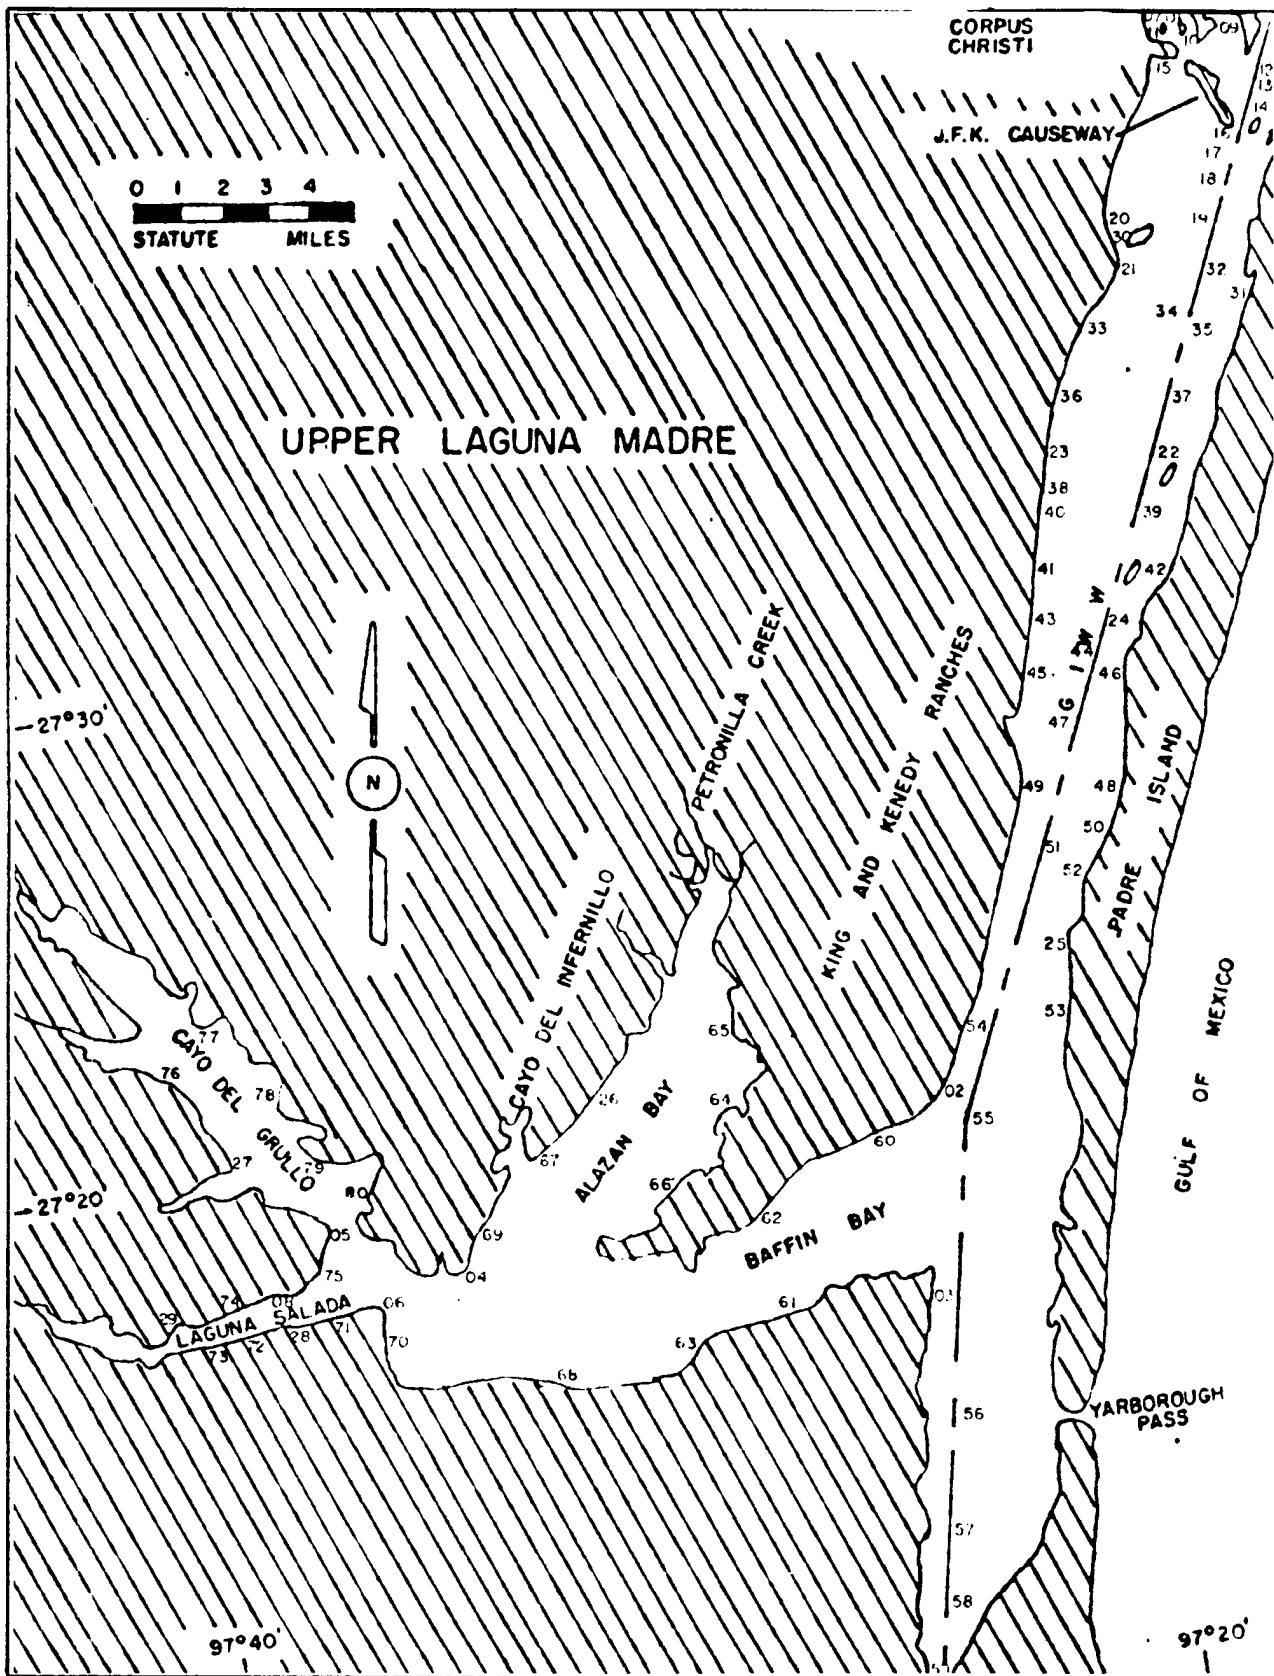

Figure 8. Map of the upper Laguna Madre indicating 18.3-m bag seine station locations, September 1979–August 1981.

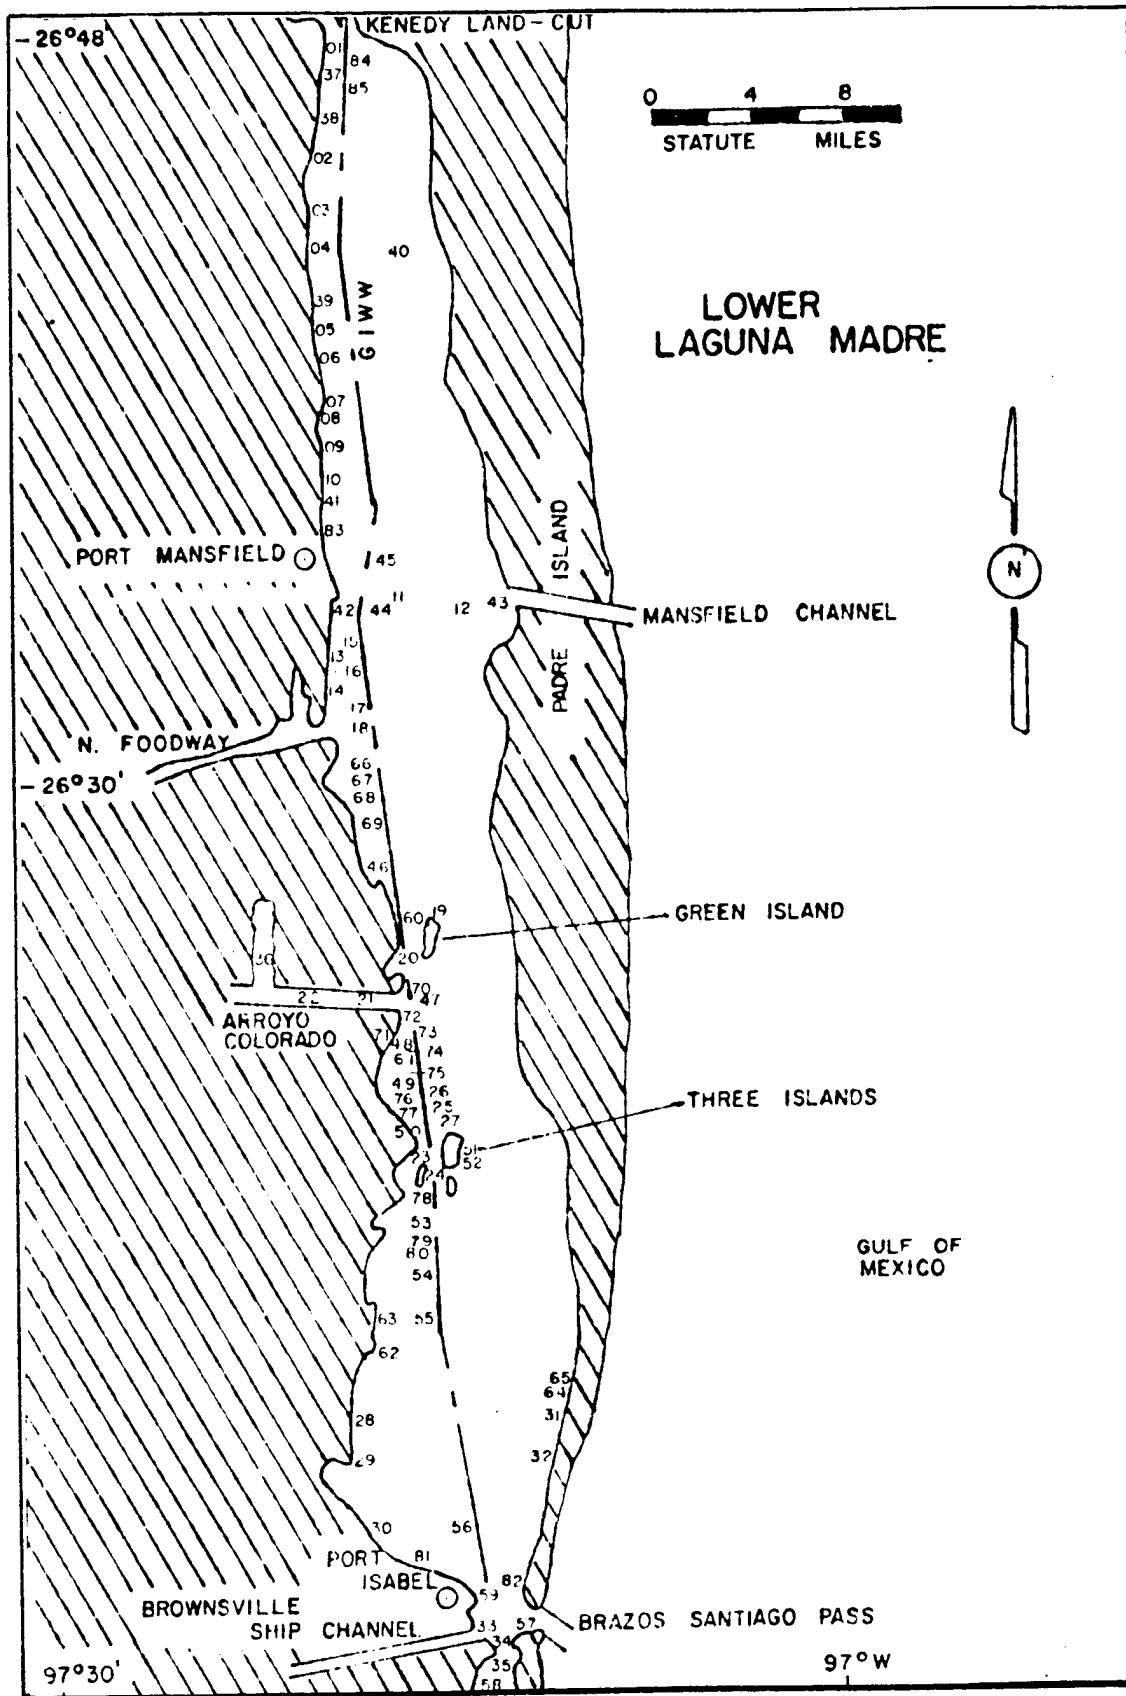

Figure 9. Map of the lower Laguna Madre indicating 18.3-m bag seine station locations, September 1979 -August 1981.

Appendix A - 18.3-m Bag Seine Station Locations

Bag seine station locations in each bay system.

Bay system	Bay	Station number	Latitude	Longitude	Station identification
Galveston	Galveston	201	29°30'20"	94°57'05"	0.2 mile E of Houston Lighting and Power Company's P. H. Robinson Generating Station's discharge canal
		202	29°30'45"	94°58'40"	Baciff Public Boat Ramp
		203	29°28'20"	94°57'10"	Inside Dickinson Bay
		204	29°27'40"	94°56'30"	0.3 mile W of Marker 21 in Dickinson Bay Channel
Moses Lake		205	29°26'05"	94°56'05"	1.2 mile SW of tide gate on entrance of Moses Lake
Moses Lake		206	29°25'40"	94°57'05"	NE side of mouth of Moses Bayou
Moses Lake		207	29°25'20"	94°56'20"	S shore of Moses Lake, 0.8 mile E of mouth
West Galveston		208	29°16'05"	94°59'10"	0.1 mile NE of Greens Cut
West Galveston		209	29°26'30"	95°54'10"	0.9 mile E of tide gate of entrance of Moses Lake
Galveston West		210	29°24'10"	94°53'10"	1.0 mile N of Texas City Dike
Galveston West		211	29°18'00"	94°56'50"	0.2 mile NE of Brasford Bayou
Galveston West		212	29°20'40"	94°53'40"	0.7 mile N of Campbell Bayou
Galveston West		213	29°20'00"	94°53'50"	0.2 mile S of Campbell Bayou
Jones Lake		214	29°18'45"	94°55'45"	1.2 mile W of ramp of E end of Jones Lake
Trinity West		215	29°37'10"	94°42'40"	0.5 mile N of Lone Oak Bayou
Greens Lake		216	29°16'35"	94°58'30"	0.6 mile SW of ICWW Marker 6
Greens Lake		217	29°15'45"	94°59'55"	SW shore of Greens Lake
West Galveston West		218	29°16'35"	94°59'30"	N shore of Greens Lake
West Galveston West		219	29°14'15"	95°00'55"	0.2 mile SW of Carancahua Cut
Halls Lake		220	29°20'10"	94°46'45"	Sea Wolf Park
		221	29°13'10"	95°01'45"	1.4 mile SW of mouth of Carancahua Cut
		222	29°10'45"	95°06'20"	0.2 mile S of The Narrows, SW shore of Halls Lake
West Chocolate		223	29°09'00"	95°02'40"	Sea Isle
Chocolate		224	29°11'10"	95°06'30"	0.3 mile NW of The Narrows
Chocolate		225	29°11'50"	95°07'15"	0.1 mile E of Amerada Cut
Chocolate		226	29°11'40"	95°07'40"	0.6 mile NE of Nymph Point

(Cont'd.).

Bay system	Bay	Station number	Latitude	Longitude	Station identification
Galveston	Chocolate	227	29°11'25"	95°08'15"	N edge Nymph Point
	Chocolate	228	29°12'25"	95°10'25"	0.2 mile N of Grassy Point
	Chocolate	229	29°11'30"	95°11'00"	1.4 mile W of Horse Grove Point
	Chocolate	230	29°11'15"	95°09'25"	0.5 mile S of Horse Grove Point
