ACKNOWLEDGEMENTS

This project was jointly funded by the Texas Parks and Wildlife Department and the U. S. Department of Commerce, National Oceanic and Atmospheric Administration, National Marine Fisheries Service under SF-51. Peng Chai provided the programming expertise needed to summarize data in tabular form.

ABSTRACT

This report summarizes annual commercial landings and ex-vessel value statistics of finfish and shellfish harvested from Texas bays and the Gulf of Mexico off Texas. Seafood dealers submitted monthly reports of purchases of shrimp, finfish, crabs, and oysters to either Texas Parks and Wildlife Department or National Marine Fisheries Service. These landings and value data for individual species groups are summarized according to bay system or Gulf area from which the product was taken and by month landed. Total coastwide landings in 1995 were more than 87 million pounds and ex-vessel value was over \$182 million.

Shrimp accounted for 80% of the weight and 88% of ex-vessel value of all seafood landed in calendar year 1995. During 1995 blue crabs, Eastern oysters and finfish made up 7%, 5%, and 7% of total landings, respectively, and 2%, 5%, and 4% of the total ex-vessel value, respectively. The average 1995 unit price for brown and pink shrimp and white shrimp were lower than the 1994 unit price (12% and 10%, respectively). The 1995 average unit price for "other" shrimp species was higher (31%) than the 1994 average. Blue crab and Eastern oyster prices were also higher (19% and 11%, respectively). Although finfish landings comprise only 7% of the total seafood landings they increased 41% over 1994. Black drum contributed 45% of the finfish landings and increased 60% over 1994.

INTRODUCTION

Gulland (1977) emphasized the importance to the fishery manager of knowing the landings of a marine resource. Landings data from both recreational and commercial fishermen are required to assess the needs for and the impacts of saltwater fishing regulations. Economic and sociologic information can also be inferred from landings data to allow for management based on the concept of optimum sustainable yield (Radovich 1975; Demory and Golden 1983; and Prochaska and Cato 1983). Annual recreational fish landings in Texas have been estimated since 1974 based on on-site interviews at fishing access sites (Warren et al. 1994).

Reports of commercial landings of marine species from Texas bays and the Gulf of Mexico (Gulf) off Texas (Figure 1) have been collected from seafood dealers since 1887 (Perret et al. 1980). These early data were collected sporadically until 1936 when annual surveys were initiated (Game, Fish and Oyster Commission 1937). Since 1936, the Texas Parks and Wildlife Department (TPWD) has monitored the landings and value of marine fishes, oysters, crabs and shrimp through a mandatory self-reporting system currently known as the Monthly Aquatic Products Report (MAPR, Figure 2) which is completed by seafood dealers (and bait dealers since September 1991). Since 1956, the National Marine Fisheries Service (NMFS) has collected landings data on shrimp through dealer reports and shrimp vessel crew interviews (Prytherch 1980) while TPWD has continued to collect data on finfish, crabs and oysters. An informal data exchange between agencies permitted the compilation of total self-reported landings of marine species. Beginning 1 April 1985, TPWD and NMFS instituted a formal cooperative agreement to collect and exchange commercial fisheries statistics.

From 1977 through 1981, additional landings information, including daily landings by species, was required of commercial finfish fishermen through Individual Sales Transaction (IST) forms. The use of the IST form was discontinued in March 1982 by the Texas Parks and Wildlife Commission because the data were inaccurate and the reporting system was largely duplicative (Green and Thompson 1981).

This report summarizes the landings and ex-vessel value of seafood purchased from commercial fishermen by seafood dealers and reported to TPWD, and landings and ex-vessel value data collected by NMFS, from 1972 through 1995.

MATERIALS AND METHODS

Licensed seafood dealers were required to complete an MAPR (Table 1) each month, listing the total weight and price paid for each species purchased from commercial fishermen. A MAPR from each dealer, detailing the preceding month's transactions, was due at TPWD's Seabrook Marine Laboratory office on or before the 10th day of each month. The Division of Statistics-Market News, NMFS, collected shrimp and menhaden landings and value data. Shrimp landings reported on MAPR's (except those reported as live and dead bait) were provided to NMFS and landings of shrimp, finfish and other seafood products gathered by NMFS were provided to TPWD. Finfish landings collected by NMFS but not purchased or handled by licensed seafood dealers are not included in this report. Commercial fishermen fishing in 1995 were subject to the fishing seasons listed in Table 2.

All MAPR's were checked for completeness by TPWD personnel. If errors were suspected, the submitting dealer was contacted to verify the accuracy of the data. Except for Eastern oysters (Crassostrea virginica) all seafood products not reported in live weight by dealers were converted to live weight (round weight) using conversion factors listed in Appendix A. Eastern oyster landings were converted to meat weight (Appendix A: Table A.2).

Landings of Eastern oysters from leases were reported by leaseholders through MAPR's, monthly oyster harvest reports submitted to the Seabrook office of TPWD and annual summary forms submitted to the Texas Department of Health, Austin, Texas. In case of discrepancies between monthly and annual summaries, the highest values for landings were used.

Gulf shrimp landed at Texas ports and reported to TPWD by the Division of Statistics-Market News, NMFS, may include shrimp harvested from the waters of other states or from areas outside the territorial waters of the U.S. in addition to those from Texas waters. NMFS reports shrimp landings from statistical grid zones along the entire U.S. Gulf coast, including Texas, in their publication Gulf Coast Shrimp Data. Gulf shrimp landings in this report are pooled for all grid zones off Texas. Unless otherwise noted, the shrimp landings reported do not include live or dead bait.

Any difference in this report compared to previous reports is due to updating of the data base and the most recent report should be considered the most accurate. Except where noted, data are reported by calendar year.

RESULTS

During 1972-95 more than 2.2 billion pounds of seafood products valued at over \$3.8 billion were reported harvested from Texas bays and the Gulf of Mexico, and landed in Texas (Tables 3-16). Total landings fluctuated irregularly during that interval, while ex-vessel value generally increased through 1986 (Figure 3). Long term trends in landings and ex-vessel value of shrimp, crabs, oysters and finfish are presented in Figures 4, 5, 6 and 7.

During 1991-1995, brown shrimp (Penaeus aztecus), pink shrimp (P. duorarum), and white shrimp (P. setiferus), represented approximately 79% of the total coastwide bay and Gulf landings by weight and 90% of total ex-vessel value (Figure 8). Blue crabs (Callinectes sapidus), represented 7% of total landings and 2% of ex-vessel value. Eastern oysters represented 4% of total landings and 4% of ex-vessel value. Finfish collectively represented 4% of total landings and 3% of ex-vessel value. Gulf landings constituted 65% of total landings and 79% of total ex-vessel value.

A comparison of landings among bay systems for 1991 through 1995, indicates that landings from the Galveston Bay system (Figure 9) exceeded all others for white shrimp (38%). Brown and pink shrimp (70%) were landed from the Galveston, Matagorda, and Aransas bay systems. Blue crabs (50%) were landed from Galveston and San Antonio bay systems. Eastern oysters were landed predominantly from the Galveston Bay system (90%). The majority of finfish were landed in the three bay systems along the lower coast of Texas; Corpus Christi, upper Laguna Madre, and lower Laguna Madre (Figure 10). A comparison of the distribution of finfish landings among Gulf grid zones during the same interval indicates that landings were greatest in grid zone 18 (Figure 10).

During the last five years (1991-1995), mean price per pound paid to commercial fishermen for black drum has generally increased (Table 17). The

1995 mean price per pound for black drum is the second highest reported over the twenty-four year period covered by this report. Black drum landings and ex-vessel value increased 60% and 73%, respectively, compared to 1994. Price per pound for flounder and sheepshead has generally increased over the same five year period. Snapper mean price per pound was down slightly in 1995. Prices paid for brown and pink shrimp, white shrimp and blue crabs have fluctuated moderately during the last five years. Brown and pink shrimp and white shrimp mean price per pound were down 12% and 10%, respectively, from 1994 levels while blue crabs saw a 19% increase over the previous year (Table 18). During 1995, ex-vessel mean price per pound for 'Other' shrimp also increased (31%) from 1994 levels. Price per pound of Eastern oysters during this interval had fallen steadily until 1993 followed by two years of increased mean price per pound (Table 18). Mean price per pound for oysters increased by 11% in 1995 over 1994 levels.

Annual summaries of landings and ex-vessel value by bay system and Gulf grid zone are presented in Appendices B and C. Monthly summaries of 1995 landings and ex-vessel values for Texas bay systems and for Gulf grid zones off Texas are presented in Appendices D and E, respectively.

Annual weight and ex-vessel value of menhaden (Brevoortia sp.) caught off Texas but landed commercially in Louisiana during 1977-1995 are presented in Appendix F. During that 19-year period, landings and ex-vessel value of menhaden have fluctuated substantially but a long-term upward or downward trend is not indicated.

The volume of Eastern oysters transplanted annually to private oyster leases in Texas bays, and the weight and ex-vessel value of oysters harvested annually from leases from 1977 to 1995 are presented in Appendix G. The number of leases and total acreage leased have remained relatively constant since 1979, while total weight landed and ex-vessel value have fluctuated widely among years. During 1995, 1.1 million pounds of meat with an ex-vessel value of over \$2.1 million were landed in Texas from oyster leases. These are the highest reported landings since 1987 (and the highest reported ex-vessel value since 1991).

The number of commercial licenses sold in Texas in each fiscal year (September-August) from 1956 to 1995 are presented in Appendix H. During the last five years (1991-1995), the number of retail fish dealer licenses had declined each year until 1994, increased in 1994, and are down 4% in 1995 from last year (Appendix H: Table H.1.). The number of wholesale dealer licenses has shown an increasing trend since 1991 with a 21% increase over 1994 levels.

Annual and monthly bait shrimp summaries of 1995 landings and ex-vessel value by bay system and Gulf grid zone are presented in Appendices I and J, respectively. Shrimp landings reported as bait and ex-vessel value increased by 53% and 51%, respectively, over 1994 levels. Over 43% of the reported live bait shrimp and 53% of the dead bait shrimp were landed in the Galveston Bay system. This represents approximately 39% and 46%, respectively, of the total ex-vessel value reported for live and dead bait shrimp.

DISCUSSION

About 87.3 million pounds of seafood with an ex-vessel value of \$182 million were reported for 1995. Landings in 1995 were higher than 1994 due primarily to the 41% increase in finfish landings. Of these, black drum landings were at an all time high. Flounder landings and ex-vessel value increased in 1995 (30% and 36%, respectively) from 1994. Using an approximate expansion factor of three (Grubb 1973), the total economic impact

of this industry at the wholesale level in Texas for 1995 was over \$546 million. This expansion does not include over 74 million pounds of menhaden worth approximately \$3.5 million (ex-vessel) caught in 1995 off Texas but landed in Louisiana, nor does it include over 0.9 million pounds of bait shrimp (live and dead) worth over \$2.4 million caught in Texas.

Brown shrimp is the single most valuable species in the commercial fishery. Although landings of brown shrimp are not reported separately from those of pink shrimp, Christmas and Etzold (1977) have estimated that brown shrimp constitute about 95% of the combined landings of these two species. The value of the bay fishery relies primarily on brown and pink shrimp (32%), followed by white shrimp (25%), Eastern oysters (23%), blue crabs (11%), and finfish (8%), in order of decreasing value (Table 6).

Although dealer reports have been used to determine relative commercial seafood landings, several assumptions must be made. In particular, the amount of inaccurate or incomplete reporting is unknown and must be considered constant when making temporal or spatial comparisons. Different reporting requirements can affect the amount of non-reporting, and thus estimates of relative abundance based on reported landings (Green and Thompson 1981). The problem of non-reporting by seafood dealers is seldom considered by fisheries managers when using commercial landings data as the basis for management decisions (Cushing 1970).

Deficiencies in reporting requirements and enforcement also affect the utility of commercial landings data. The 72nd Legislature enacted legislation, effective 1 September 1991, which increased the maximum penalty to \$500 and possible license forfeiture for failing to file a required report (Anonymous 1991). Present Texas law, however, does not require all commercial landings to be reported. Unlicensed consumers who purchase seafood products directly from commercial fishermen without the intent to resell the products are exempt from reporting. Non-reporting for this sector may continue to be abnormally high while the program is further developed. Marine products harvested by licensed commercial fishermen and sold directly to a restaurant owner, operator or employee for consumption by the restaurant's patrons on the restaurant's premises are not reportable. Marine products harvested as bait and sold to a licensed bait or seafood dealer were not reportable until September 1991. However, comprehensive implementation of the bait program was not completed until 1994. Increases in reported landings in bait shrimp from 1994 to 1995 may have been due to non-reporting. By increasing personal contacts and improved law enforcement compliance has improved. Another deficiency in the present reporting system is that even though the MAPR's provide a section for gear used, reporting compliance is low. This limits the ability to provide estimates of commercial fishing effort by gear type for each species landed. These deficiencies may limit the use of these commercial data for fisheries management purposes.

	Others (List)							
96050	Crab, Blue			P Q I D				
98360	Crab, Stone			P Q I D	C			
31249	Live Bait Shrimp			P Q I D	O T			
31250	Dead Bait Shrimp			P Q I D	O T			
92260	Shrimp, Brown & Pink			P Q I D	O T			
92290	Shrimp, Other			P Q I D	O T			
96000	Shrimp, White			P Q I D	O T			
92300	Squid, Unclass			P Q I D				
				No. of Barrels	Price per Barrel			
93000	Oysters, Eastern							

Oysters handled must be reported to the nearest whole barrel. One barrel equals: 3 boxes, 10" x 20" x 13 1/2") with oysters piled no more than 2 1/2" above the height of the box at the center OR 2 gallons of shucked oysters.

Unit Codes
P = Pounds
Q = Quarts
I = Individual
D = Dozen

Fish Processing Codes
R = Ungutted (whole)
F = Fillets
W = Gilled and Gutted
H = Headed
X = Other (specify)

Shellfish Processing Codes

O = Heads-On
T = Tails
C = Claws

Gear Codes
 S = Shrimp Trawl
 L = Long-Line
 T = Trotline
 B = Bandit
 G = Gig
 C = Crab Trap
 X = Other (specify)

Grand Total

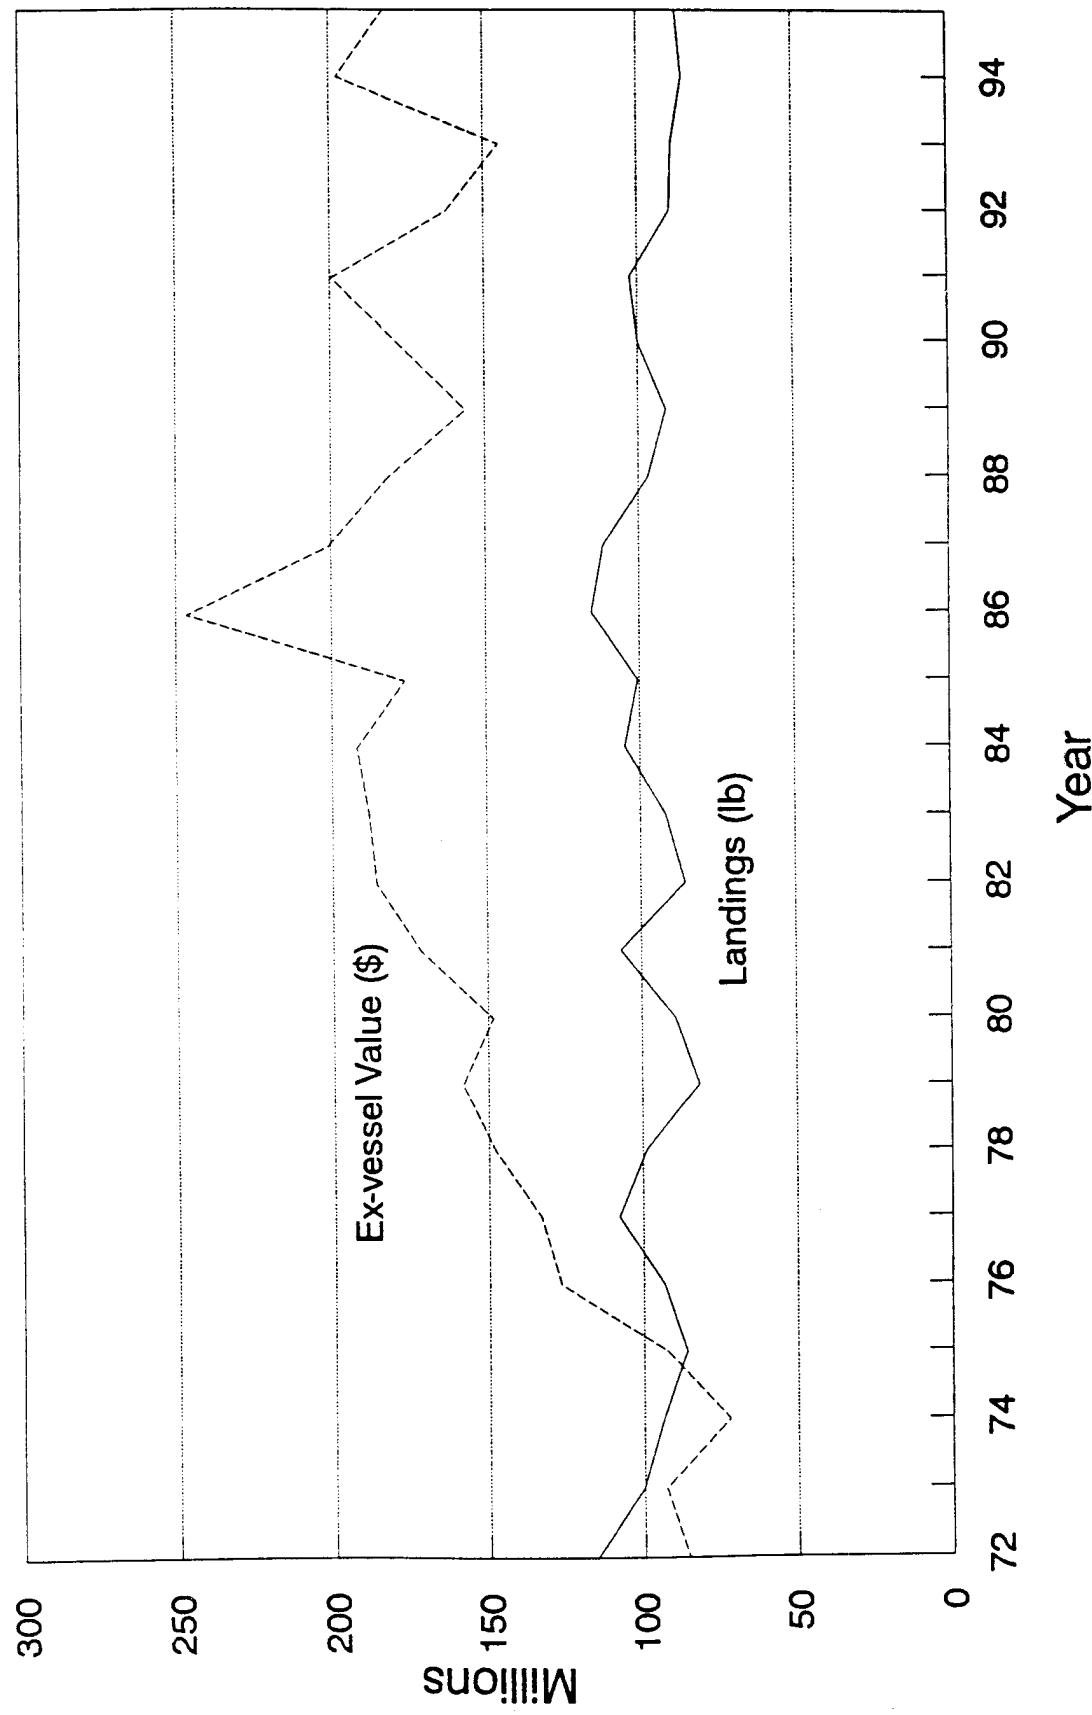

Figure 3. Texas commercial landings (lb) and ex-vessel value (\$) for all seafood landed from bays and the Gulf of Mexico (grand total), by year for 1972-1995.

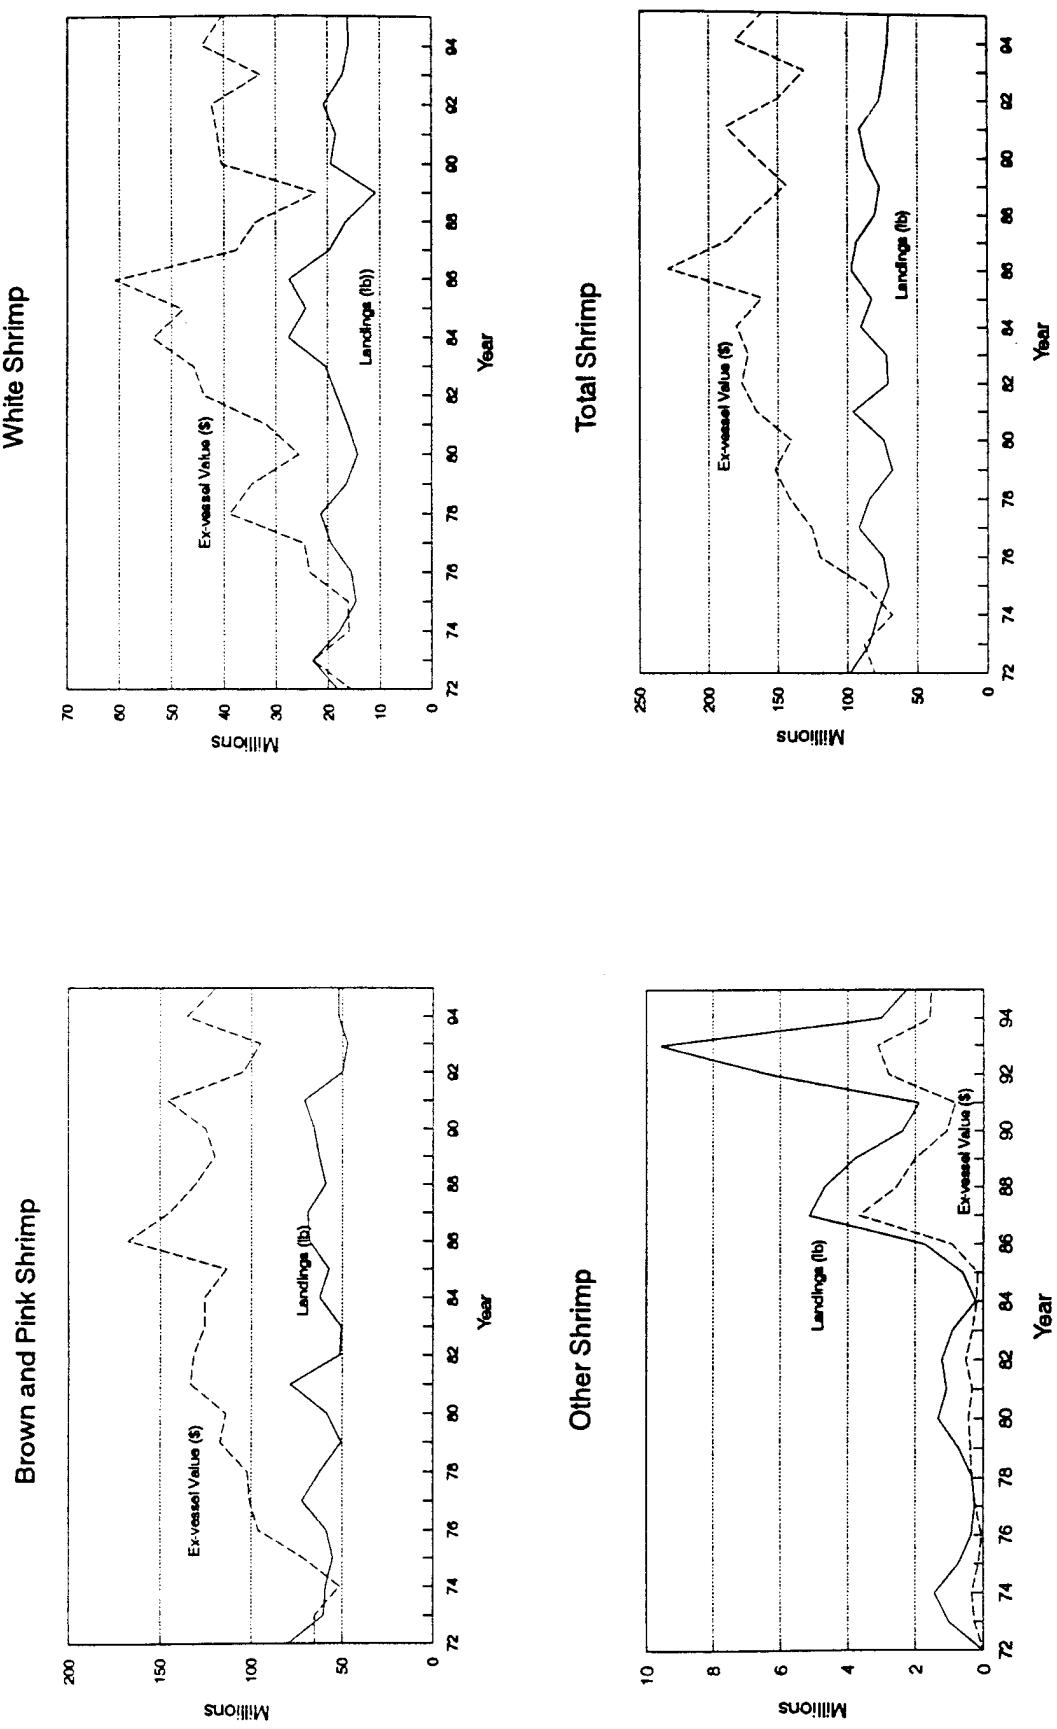

Figure 4. Texas commercial landings (lb) and ex-vessel value (\$) of brown and pink shrimp, white shrimp, other shrimp and total shrimp landed for 1972-1995.

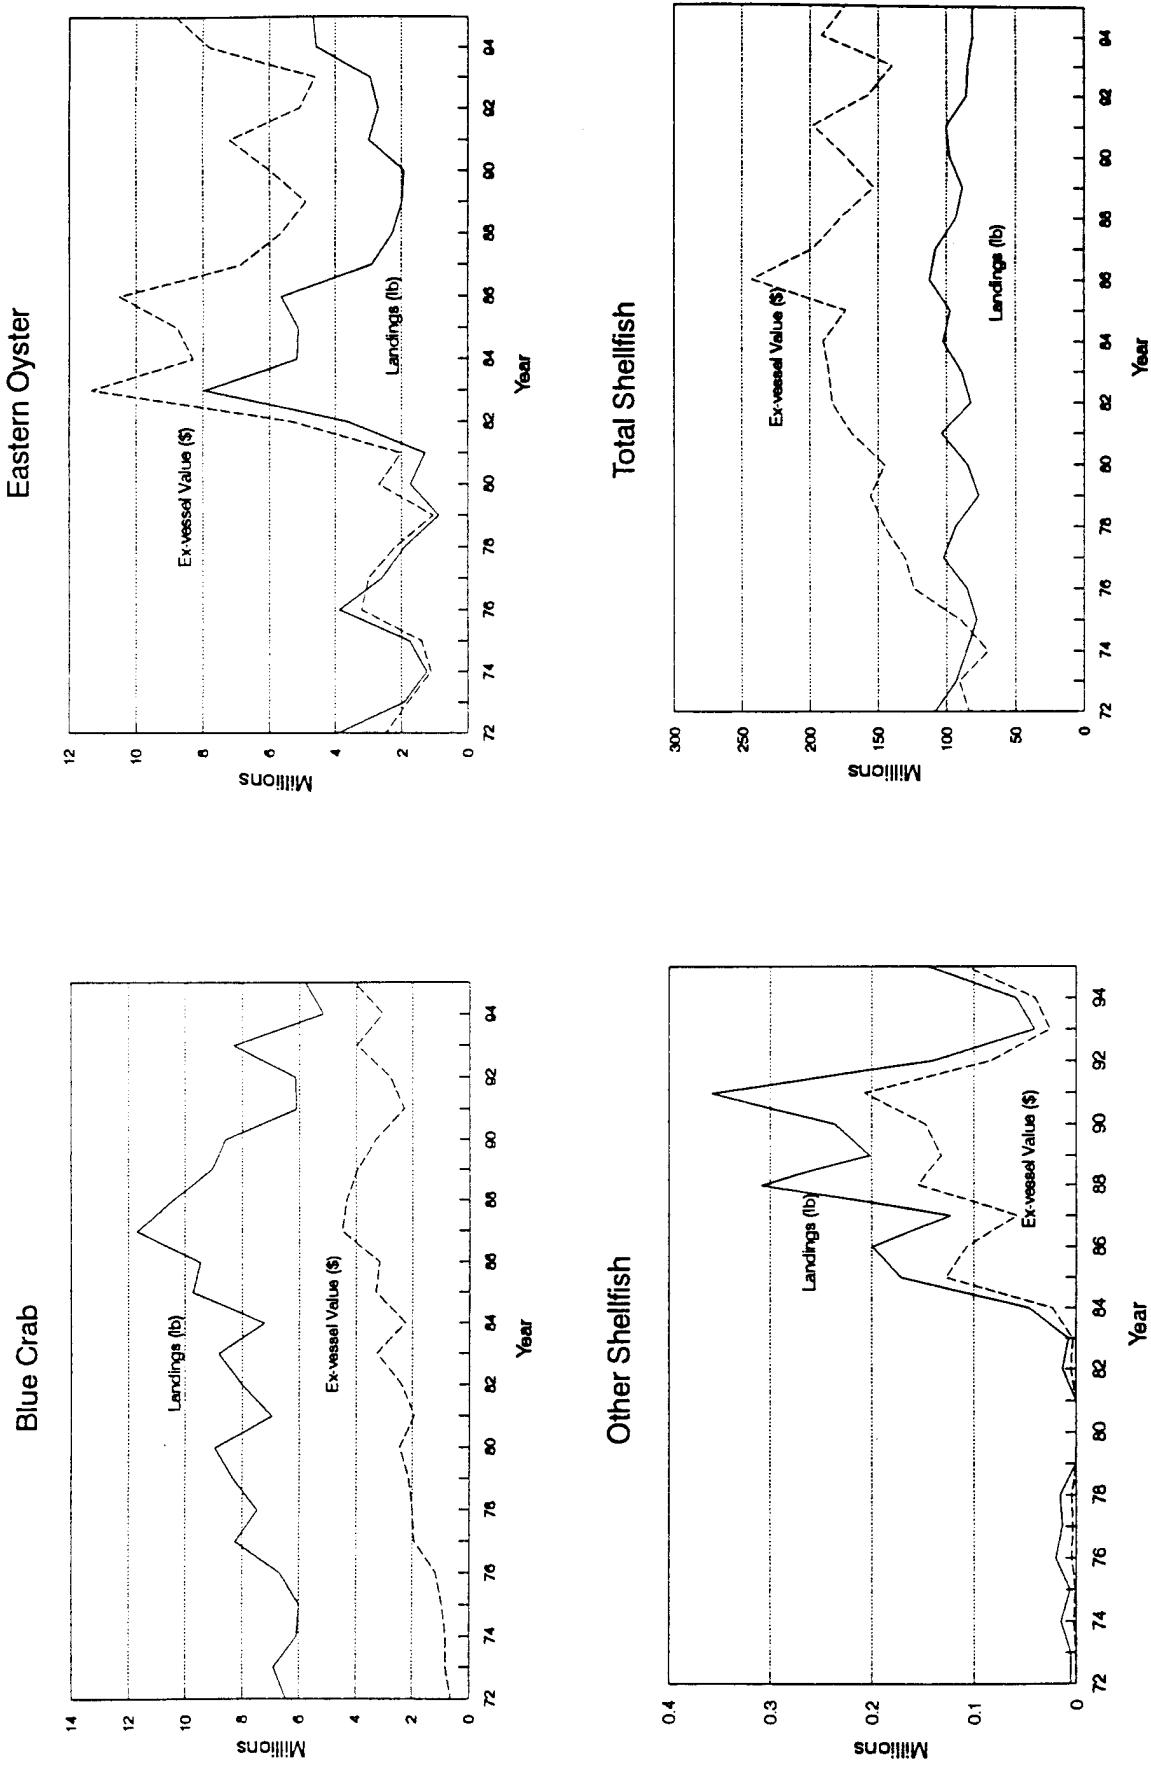

Figure 5. Texas commercial landings (lb) and ex-vessel value (\$) of blue crab, Eastern oyster, other shellfish and total shellfish landed for 1972-1995.

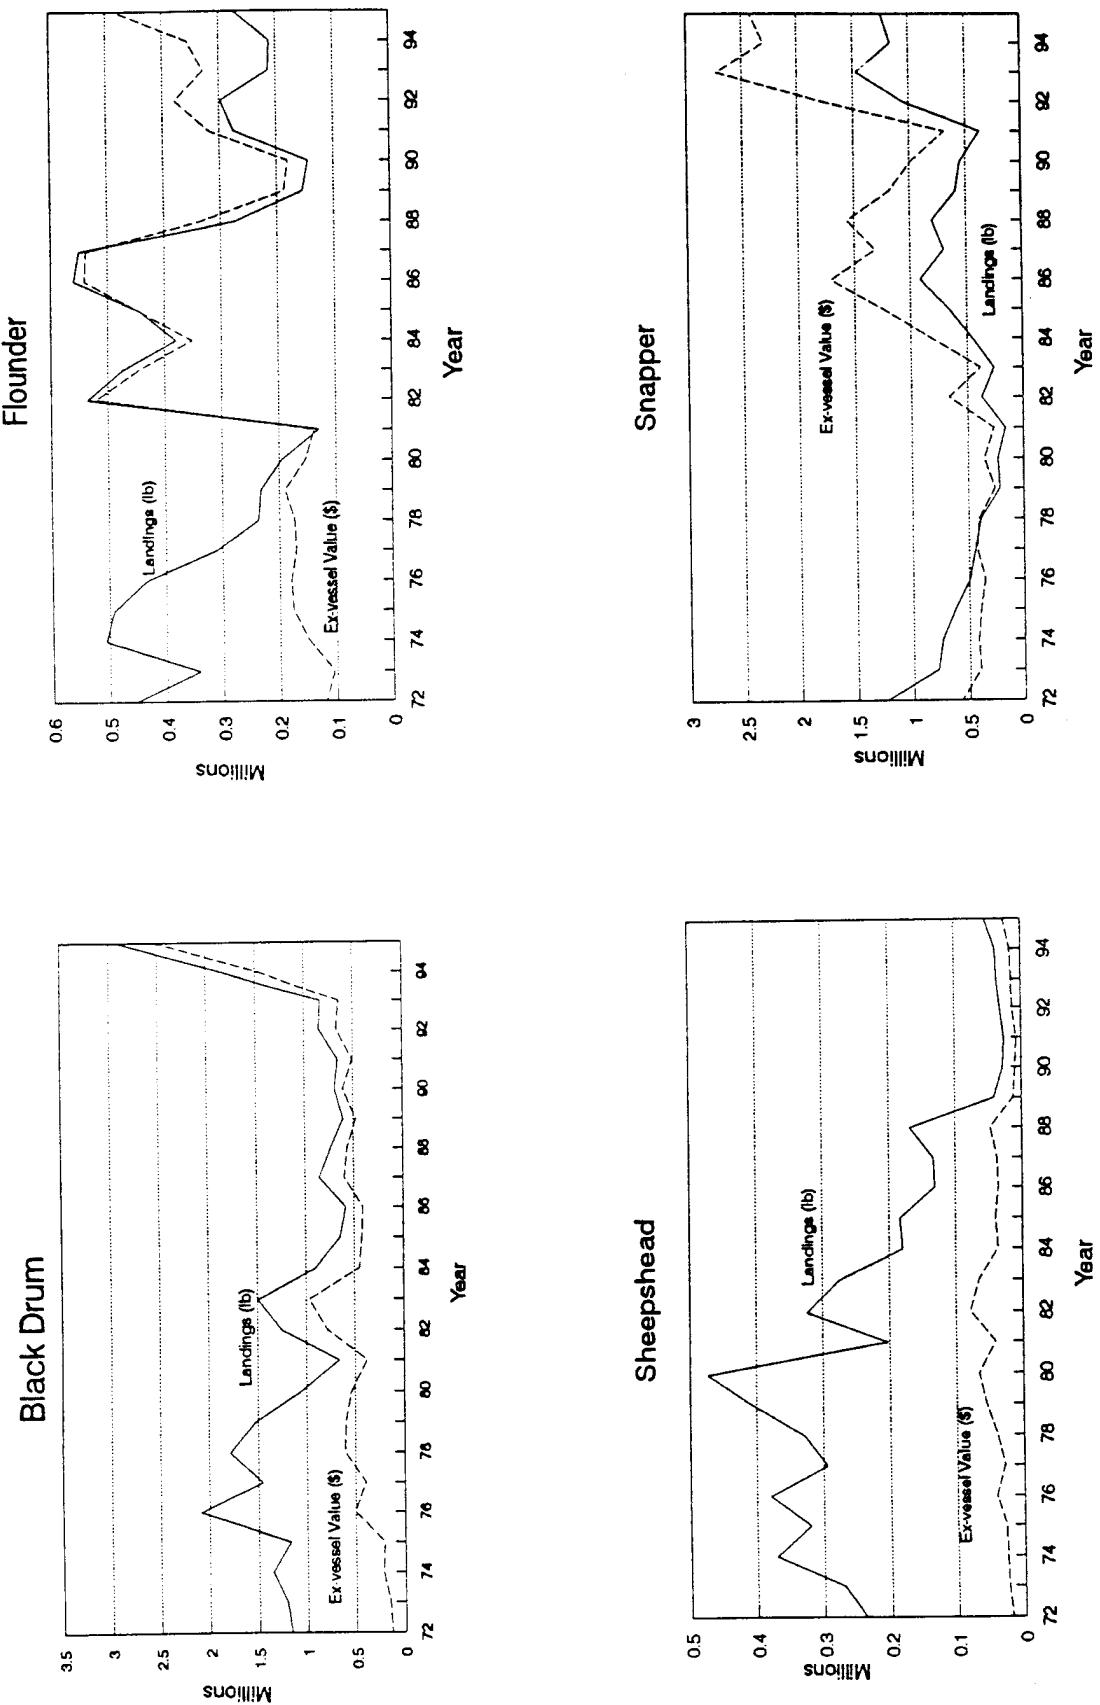

Figure 6. Texas commercial landings (lb) and ex-vessel value (\$) of black drum, flounder, sheepshead and snapper (all species) landed for 1972-1995.

Total Finfish

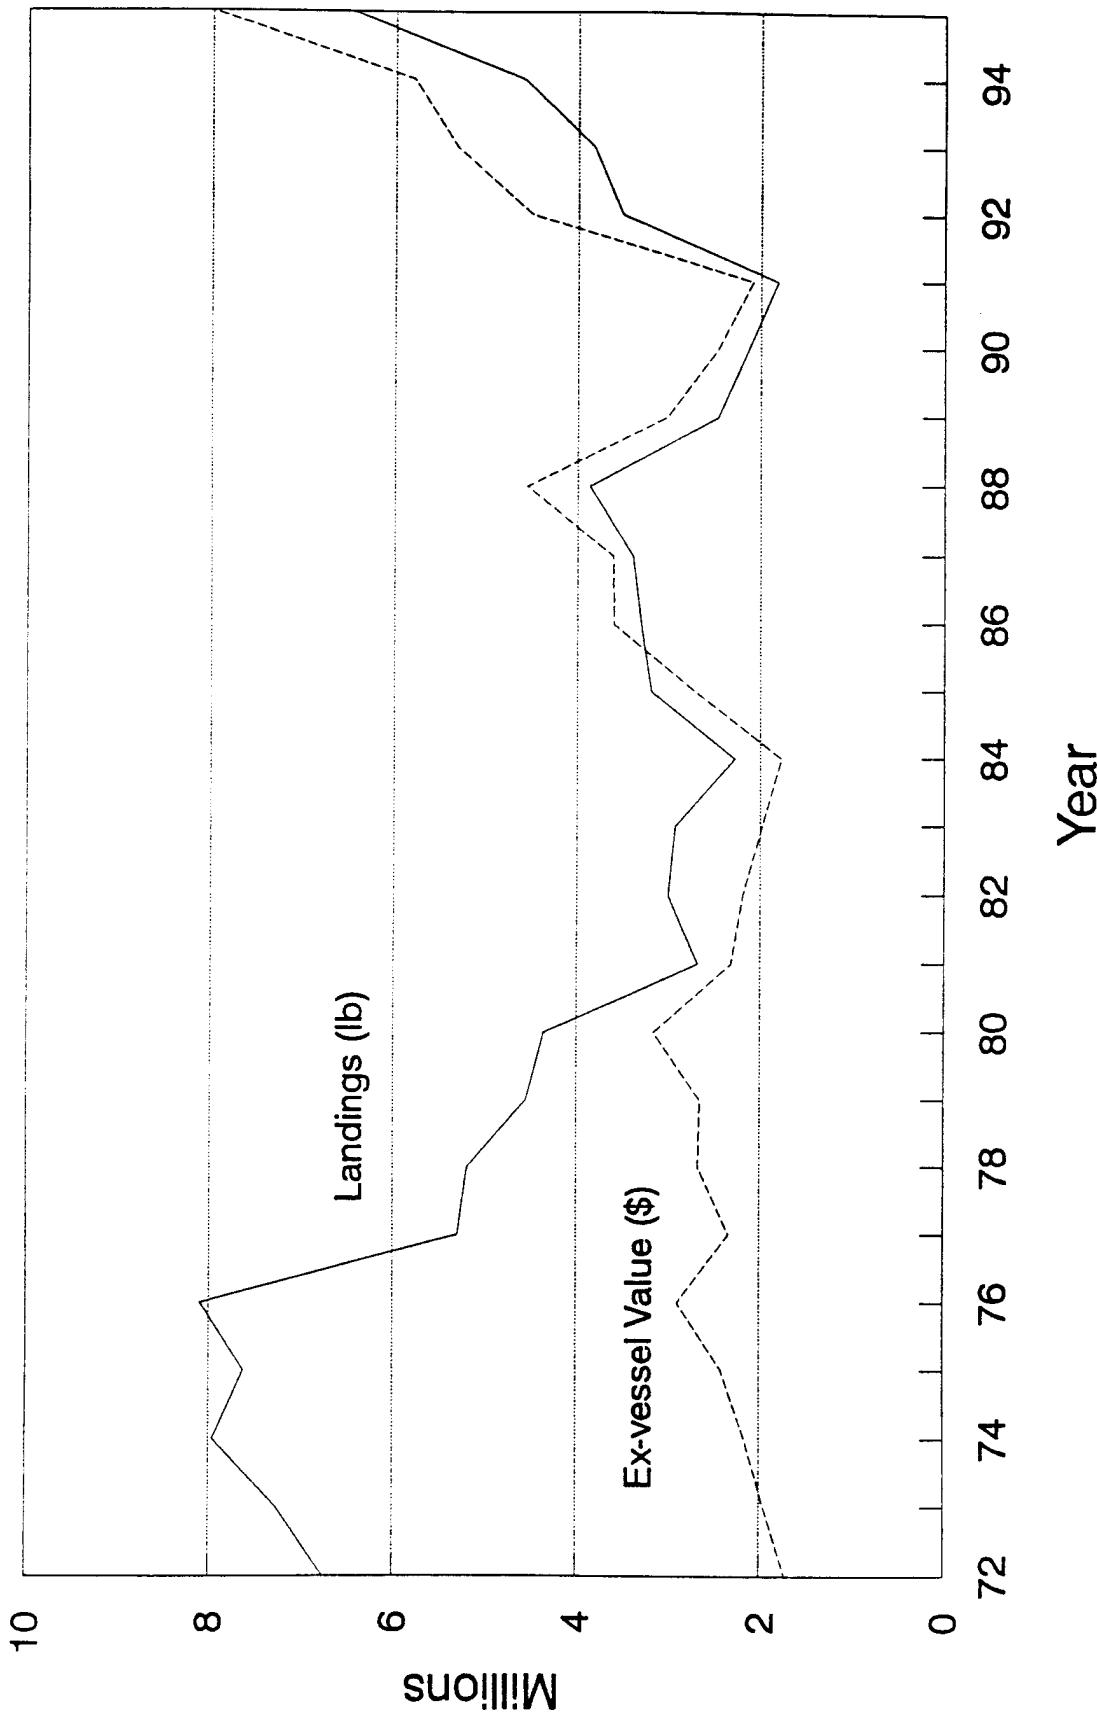

Figure 7. Texas commercial landings (lb) and ex-vessel value (\$) of total finfish for 1972-1995.

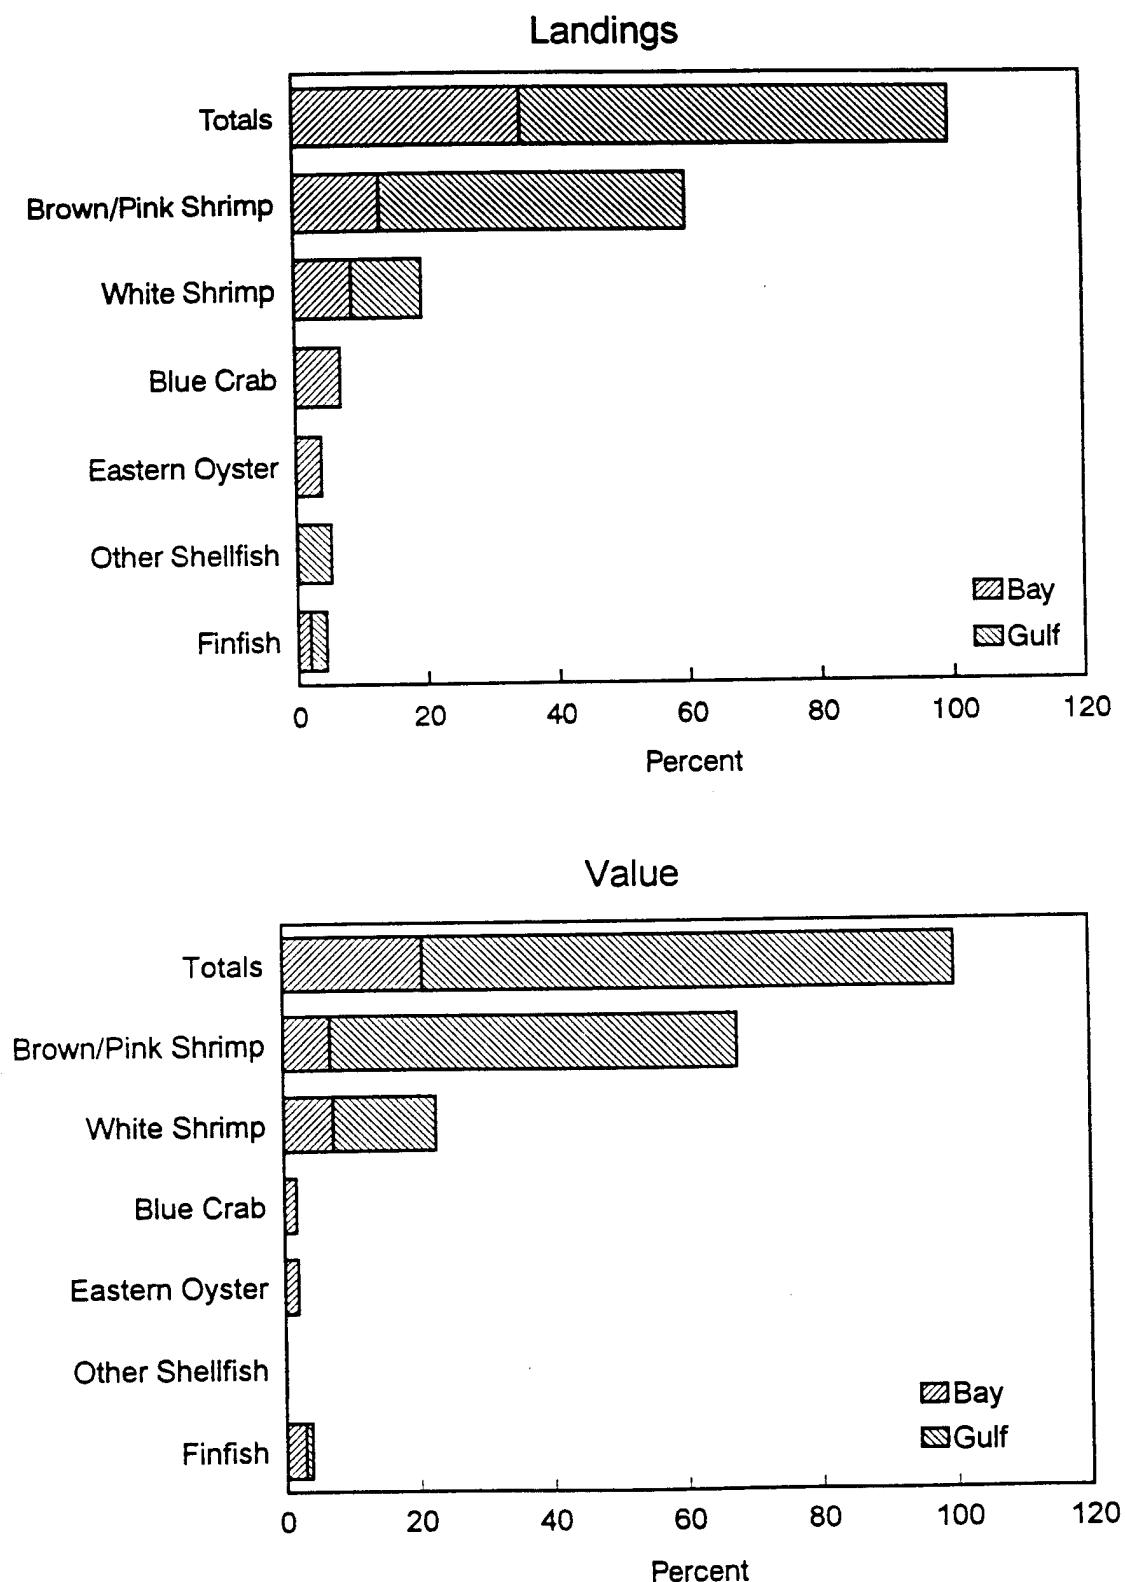

Figure 8. Percent of total coastwide bay and Gulf landings and ex-vessel value contributed by major commercial species groups for the interval 1991-1995.

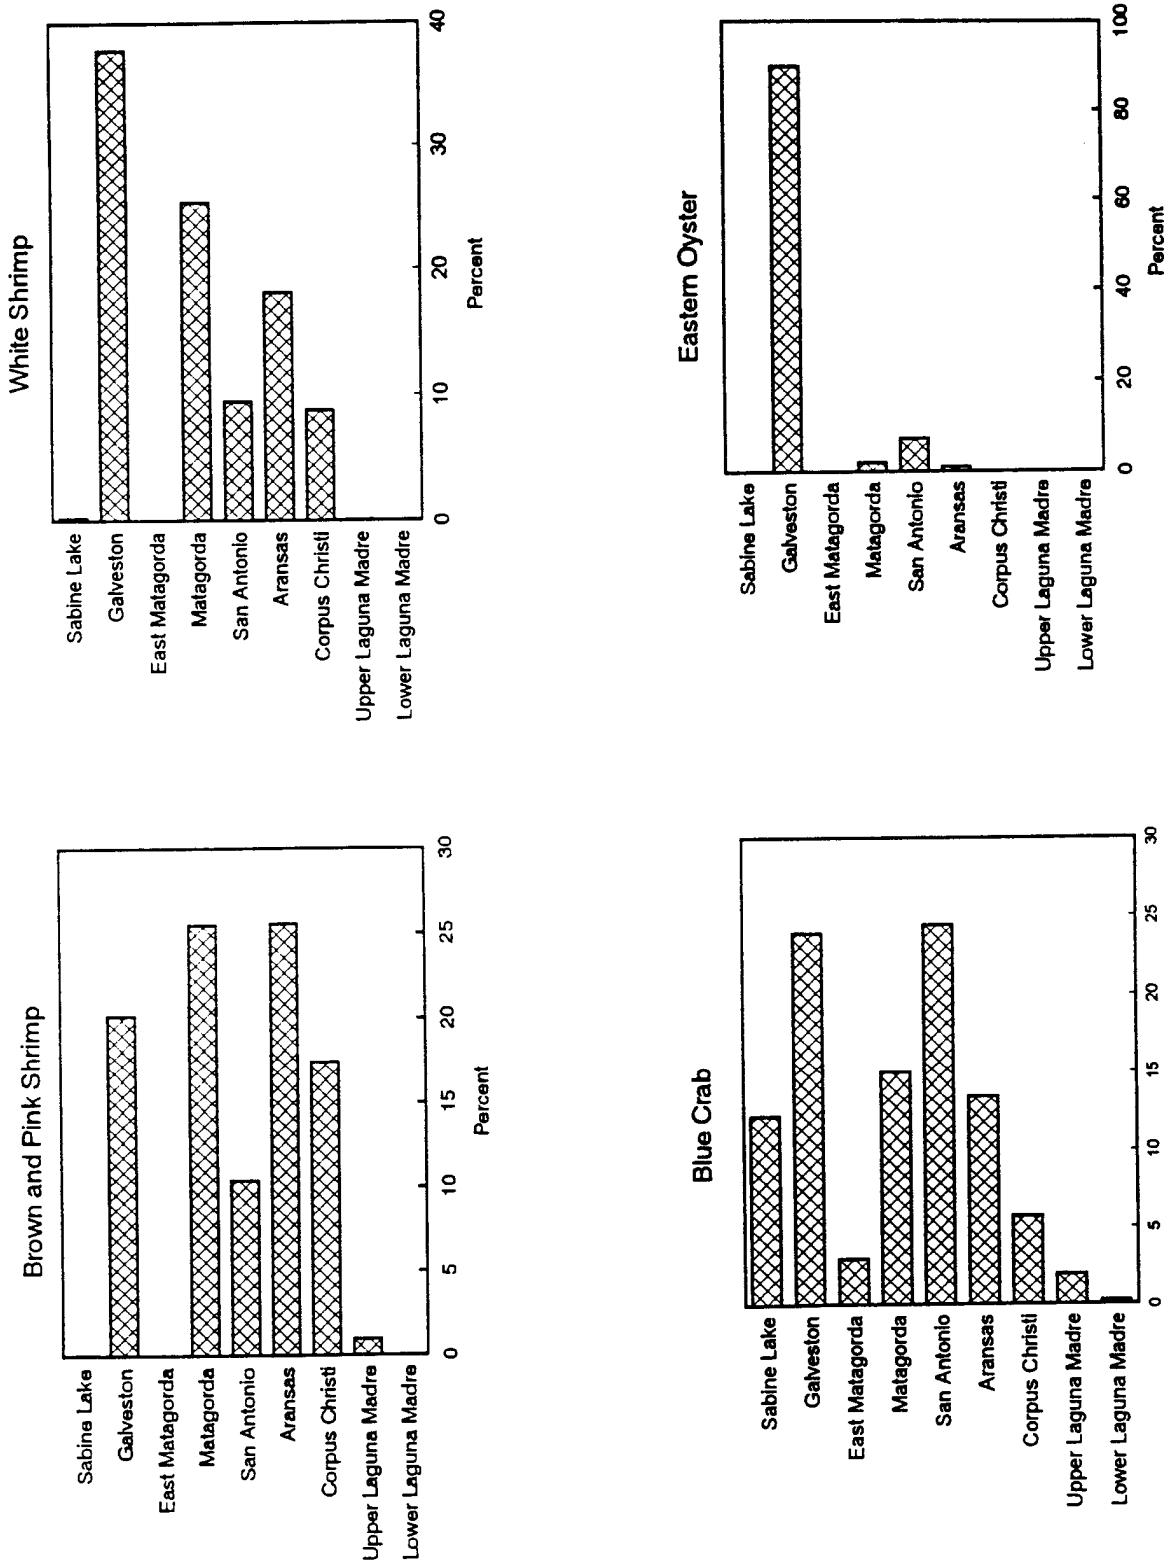

Figure 9. Percent of total landings of brown and pink shrimp, white shrimp, blue crab, and Eastern oysters contributed by each major bay system for the interval 1991-1995.

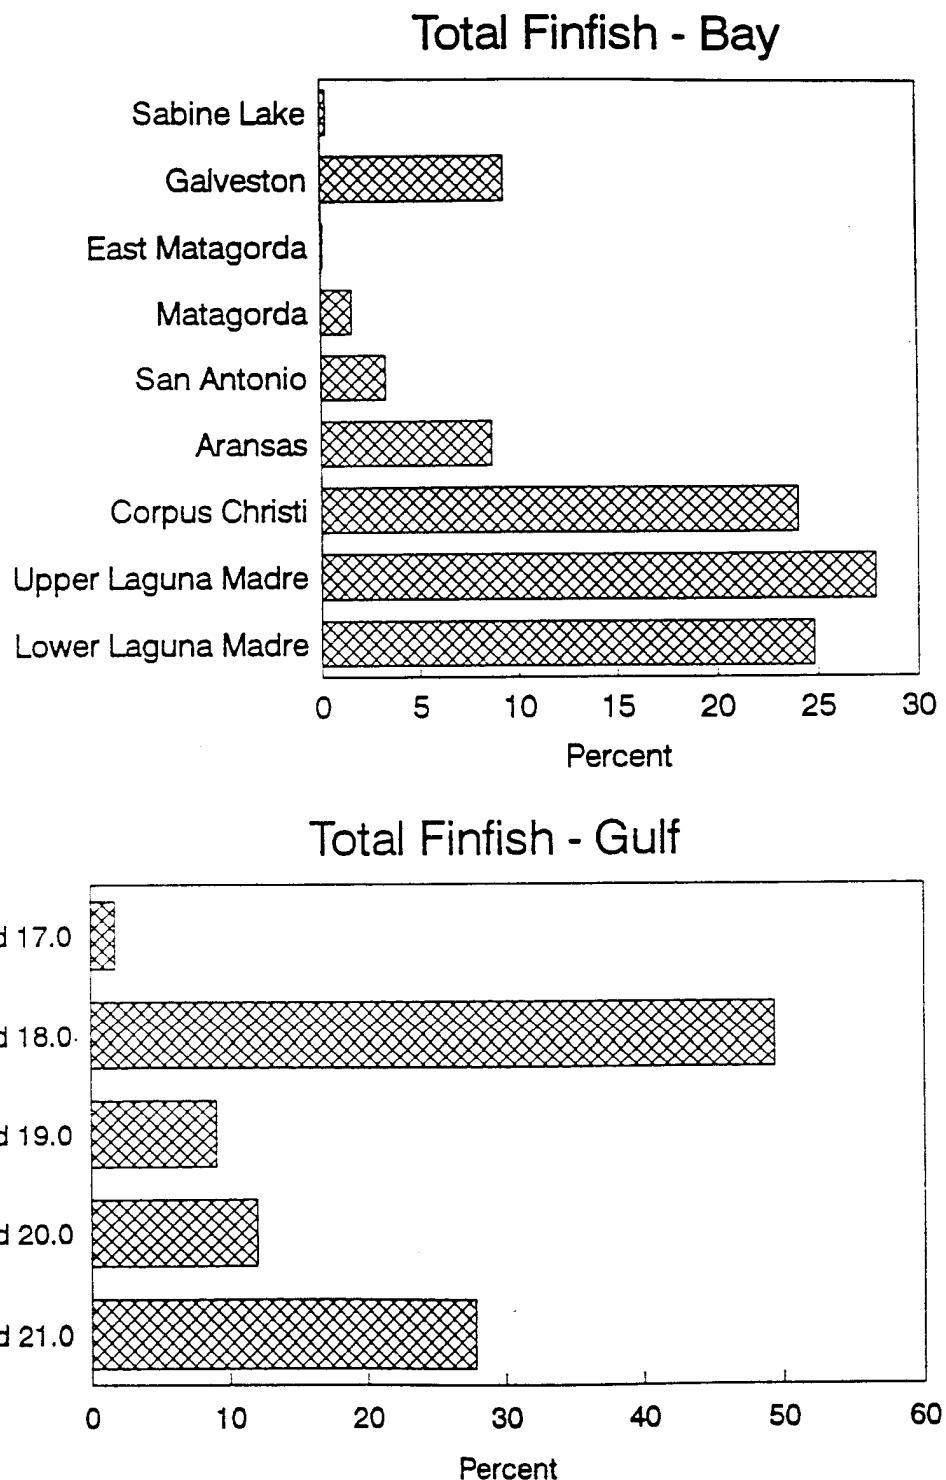

Figure 10. Percent of total finfish landings from bays contributed by each bay system and percent of total finfish landings from the Gulf contributed by each grid zone for the interval 1991-1995.

Appendix A. Conversion factors used for finfish and shellfish.

Table A.1. Factors for converting finfish processed weight to live weight^a.

^aConversion factors provided by Texas Parks and Wildlife Department and National Marine Fisheries Service.

Table A.2. Factors for converting blue crab to live weight, Eastern oyster to meat weight, and stone crab claw weight to live weight (TPWD unpublished data).

<u>Species</u>	<u>Conversion factors</u>
Blue crab	6 lb/1 dozen
Eastern oyster (to oyster meat)	17.5 lb/barrel
Eastern oyster (to oyster meat)	8.75 lb/gallon
Live Eastern oyster	1 barrel = 3 bushels, baskets or sacks.
Stone crab claw	1 lb claw = 4 lb live weight

Table A.3. Factors for converting shrimp heads-off weight to heads-on weight (Chin 1960).

<u>Species</u>	<u>Conversion factors</u>
Brown shrimp	1.61
Pink shrimp	1.60
Rock shrimp	1.67
Royal red shrimp	1.80
Seabob	1.53
White shrimp	1.54

Appendix B. Weight (lb) and ex-vessel value (\$), by bay system, of commercial finfish and shellfish landings along the Texas coast during 1972-1995.

Table B.1. Weight (lb) of each species landed commercially from the Sabine Lake system, 1972-1995.

^aData prior to 1978 not available.

^bThe weight of oysters in a transplant barrel is not comparable to oyster meat weight in a harvest barrel (culled market oysters).

Table G.3. Total weight (lb x 1,000) of Eastern oyster meat landed from private oyster leases in Texas bay systems during 1978-1995.
Data based on monthly oyster harvest reports submitted to TPWD by oyster leaseholders.

*License data are not additive for any row since dealers may have multiple licenses.

^bLarge = Dealer located in a city with >40,000 population.

Medium = Dealer located in a city with 7,500 to 40,000 population.

Small = Dealer located in a city with <7,500 population.

^cBeginning in fiscal year 1984, all retail fish dealer licenses were combined into one category.

Table H-2. Number of commercial saltwater fishermen licenses sold in Texas in each fiscal year from 1956 through 1995. Before 1972, license sales were assigned to the fiscal year in which license applications were processed in Austin. Thereafter, sales reflect actual licenses for the license year, regardless of when the sales were processed. Total non-resident licenses are in parentheses.

^aNetting in saltwater was prohibited September 1, 1988.

^bCommercial oyster license not required for fishermen holding commercial bay or bait shrimp boat licenses from 1971 through 1987. Commercial oyster boat license took place of dredge license in 1990.

Table H.4. Number of commercial saltwater boat and vessel licenses sold in Texas in each fiscal year from 1956 through 1995*. Before 1972, license sales were assigned to the fiscal year in which license applications were processed in Austin. Thereafter, sales reflect actual licenses for the license year, regardless of when the sales were processed. Total non-resident licenses are within parentheses.

Fiscal Year	Fishing boat	Fishing Boat (menhaden only)	Gulf shrimp	Bay shrimp	Bay-bait shrimp boat	Bait shrimp boat	Commercial oyster boat
