ACKNOWLEDGEMENTS

This project was jointly funded by the Texas Parks and Wildlife Department and the U. S. Department of Commerce, National Oceanic and Atmospheric Administration, National Marine Fisheries Service under SF-30. Michael Johns contributed to the collection and editing of field data sheets. Peng Chai provided the programming expertise needed to summarize data in tabular form. Rick Spaw assisted with the preparation of figures. Hal Osburn and Tom Wagner edited the final report.

ABSTRACT

This report summarizes annual commercial landings and ex-vessel value statistics of finfish and shellfish harvested from Texas bays and the Gulf of Mexico off Texas. Seafood dealers submitted monthly reports of purchases of shrimp, finfish, crabs, and oysters to either Texas Parks and Wildlife Department or National Marine Fisheries Service. These landings and value data for individual species groups are summarized according to bay system or Gulf area from which the product was taken and by month landed. Total coastwide landings in 1990 were more than 98 million pounds and ex-vessel value was over \$175 million. These values were 14% and 29%, respectively, below the record values of 1986.

Shrimp accounted for 87% of the weight and 93% of ex-vessel value of all seafood landed in calendar year 1990. During 1990 blue crabs, Eastern oysters and finfish made up 10%, 5%, and 4% of total landings, respectively, and 3%, 4%, and 3% of the total ex-vessel value, respectively. Compared to 1989 prices, the 1990 average unit price for shrimp did not change; the unit prices of blue crabs and finfish decreased 14% and 7%, respectively, while the unit price of Eastern oysters increased 25%.

INTRODUCTION

Gulland (1977) emphasized the importance to the fishery manager of knowing the landings of a marine resource. Landings data from both recreational and commercial fishermen are required to assess the needs for and the impacts of saltwater fishing regulations. Economic and sociologic information can also be inferred from landings data to allow for management based on the concept of optimum sustainable yield (Radovich 1975). Annual recreational fish landings in Texas have been estimated since 1974 based on on-site interviews at fishing access sites (Green et al. 1991).

Reports of commercial landings of marine species from Texas bays and the Gulf of Mexico (Gulf) off Texas (Figure 1) have been collected from seafood dealers since 1887 (Perret et al. 1980). These early data were collected sporadically until 1936 when annual surveys were initiated (Game, Fish and Oyster Commission 1937). Since 1936, the Texas Parks and Wildlife Department (TPWD) has monitored the landings and value of marine fishes, oysters, crabs and shrimp through a mandatory self-reporting system known as the Monthly Marine Products Report (MMPR, Figure 2) which is completed by seafood dealers. Since 1956, the National Marine Fisheries Service (NMFS) has collected landings data on shrimp through dealer reports and shrimp vessel crew interviews (Prytherch 1980) while TPWD continued to collect data on fishes, crabs and oysters. An informal data exchange between agencies permitted the compilation of total self-reported landings of marine species. Beginning 1 April 1985, TPWD and NMFS instituted a formal cooperative agreement to collect and exchange commercial fisheries statistics.

From 1977 through 1981, additional landings information, including daily landings by species, was required of commercial finfish fishermen through Individual Sales Transaction (IST) forms. The use of the IST form was discontinued in March 1982 by the Texas Parks and Wildlife Commission because the data were inaccurate and the reporting system was largely duplicative (Green and Thompson 1981).

This report summarizes the landings and ex-vessel value of seafood purchased from commercial fishermen by seafood dealers and reported to TPWD, and landings and ex-vessel value data collected by NMFS, from 1972 through 1990.

MATERIALS AND METHODS

Licensed seafood dealers were required to complete an MMPR each month, listing the total weight and price paid for each species purchased from commercial fishermen (Table 1). An MMPR from each dealer, detailing the preceding month's transactions, was due at a TPWD office on or before the 10th day of each month. The Division of Statistics-Market News, NMFS, collected shrimp and menhaden landings and value data. Shrimp landings reported on MMPRs were provided to NMFS and landings of shrimp, finfish and other seafood products gathered by NMFS were provided to TPWD. Finfish landings collected by NMFS but not purchased or handled by licensed seafood dealers are not included in this report. Commercial fisherman fishing in 1990 were subject to the fishing regulations listed in Table 2.

All MMPRs were checked for completeness by TPWD personnel. Suspected errors were corrected after contacting the submitting dealer to check the questionable information and verify any necessary corrections. All seafood products, except Eastern oysters (Crassostrea virginica), which were not reported in live weight by dealers were converted to live weight (round weight) using conversion factors listed in Appendix A. Eastern oyster landings were converted to meat weight (Appendix A, Table A.3).

Landings of Eastern oysters from leases were reported by leaseholders through MMPRs, monthly landings forms submitted to the Seabrook office of TPWD and annual summary forms submitted to the Austin Headquarters of TPWD. In the case of discrepancies between monthly and annual summaries, the highest values for landings were used.

Gulf shrimp landed at Texas ports and reported to TPWD by the Division of Statistics-Market News, NMFS, may include shrimp harvested from the waters of other states or from areas outside the territorial waters of the U.S. in addition to those from Texas waters. NMFS reports shrimp landings from statistical grid zones along the entire U.S. Gulf coast, including Texas, in their publication Gulf Coast Shrimp Data. Gulf shrimp landings in this report are pooled for all grid zones off Texas.

Any difference in this report compared to previous reports is due to updating of the data base and the most recent report should be considered the most accurate. Except where noted, data are reported by calendar year.

RESULTS

During the 19-year period of 1972-90 more than 1.8 billion pounds of seafood products valued at over \$2.9 billion were reported harvested from Texas bays and the Gulf of Mexico, and landed in Texas (Tables 3-16). Total landings fluctuated irregularly during that interval, while ex-vessel value generally increased through 1986 (Figure 3). Long term trends in landings and ex-vessel value of shrimp, crabs, oysters and finfish are presented in Figures 4, 5, 6 and 7.

During the interval 1986-1990, brown shrimp (Penaeus aztecus), pink shrimp (P. duorarum), and white shrimp (P. setiferus), represented approximately 83% of the total coastwide bay and Gulf landings by weight and 92% of total ex-vessel value (Figure 8). Blue crabs (Callinectes sapidus), represented 10% of total landings and 3% of ex-vessel value. Eastern oysters represented 5% of total landings and 4% of ex-vessel value. Finfish collectively represented 4% of total landings and 3% of ex-vessel value. Gulf landings constituted 65% of total landings and 82% of total ex-vessel value.

A comparison of landings among bay systems for the interval 1986 through 1990 indicates that landings from the Galveston Bay system equalled or exceeded all others for every product group except brown and pink shrimp (Figures 9 and 10). Shrimp and blue crabs were landed predominantly from the Galveston, Matagorda, San Antonio and Aransas bay systems. Landings of

Eastern oysters were highest in the Galveston, Matagorda and San Antonio bay systems. Finfish were landed predominantly from the Galveston, Corpus Christi, upper and lower Laguna Madre bay systems (Figure 10). A comparison of the distribution of finfish landings among Gulf grid zones during the same interval indicates that landings were greatest in grid zone 18.

During the last five years (1986-1990), mean price per pound paid to commercial fishermen for black drum, flounder, sheepshead and snapper have generally increased (Table 17). In contrast, prices paid for brown and pink shrimp, white shrimp and blue crabs have fluctuated moderately but have not shown a general increase (Table 18). Price per pound of Eastern oysters has generally increased during this interval. Compared to 1989 prices, the average 1990 unit price for shrimp did not change; the unit price of blue crabs and finfish decreased 14% and 7%, respectively, while the unit price of Eastern oysters increased 25%.

Annual summaries of landings and ex-vessel value by bay system and Gulf grid zone are presented in Appendices B and C. Monthly summaries for 1990 of landings and ex-vessel values for Texas bay systems and for Gulf grid zones off Texas are presented in Appendices D and E, respectively.

Annual weight and ex-vessel value of menhaden (Brevoortia sp.) caught off Texas but landed commercially in Louisiana during 1977-1990 are presented in Appendix F. During that 14-year period, landings and ex-vessel value of menhaden have fluctuated substantially but a long-term upward or downward trend is not indicated.

The volume of Eastern oysters transplanted annually to private oyster leases in Texas Bays, and the weight and ex-vessel value of oysters harvested annually from leases from 1977 to 1990 are presented in Appendix G. The number of leases and total acreage leased have remained relatively constant since 1979 while total weight landed and ex-vessel value have fluctuated widely among years. During 1990, 704,200 pounds of meat valued at \$2,591,800 was landed in Texas from oyster leases.

The number of commercial licenses sold in Texas in each fiscal year (September-August) from 1956 to 1990 are presented in Appendix H. During the last five years (1986-1990), the number of retail fish dealer licenses has declined each year; the number of wholesale dealer licenses has fluctuated but has not shown an increasing or decreasing trend.

DISCUSSION

Commercial fishing continues to be an important industry in Texas. Approximately 98 million pounds of seafood with an average ex-vessel value of \$175 million are reported landed annually. Using an approximate expansion factor of three (Grubb 1973), the total economic impact of this industry at the wholesale level in Texas approximates one-half billion dollars annually. This does not include over 99 million pounds of menhaden worth over \$4 million (ex-vessel) that are annually caught off Texas but landed in Louisiana.

Brown shrimp is the single most valuable species in the commercial fishery. Although landings of brown shrimp are not reported separately from those of pink shrimp, Christmas and Etzold (1977) have estimated that brown shrimp constitute about 95% of the landings of these two species combined. The value of the bay fishery relies primarily on white shrimp followed by brown and pink shrimp, Eastern oysters, blue crabs and finfish in order of decreasing value.

Although commercial landings data have been used to determine the relative abundance of the resource, several assumptions must be made. In particular, the amount of inaccurate or incomplete reporting is typically unknown and must be considered constant when making temporal or spatial comparisons. Different reporting requirements can affect the amount of non-reporting, and thus, estimates of relative abundance based on reported landings (Green and Thompson 1981). The problem of non-reporting by seafood dealers is seldom considered by fisheries managers when using commercial landings data as the basis for management decisions (Cushing 1970).

Deficiencies in reporting requirements and enforcement also affect the utility of commercial landings data. The 72nd Legislature enacted legislation, effective 1 September 1991, which increased the maximum penalty to \$500 and possible license forfeiture for failing to file a required report (Anonymous 1991). Present Texas law, however, does not require all commercial landings to be reported. Unlicensed consumers who purchase seafood products directly from commercial fishermen without the intent to resell the products are exempt from reporting. Marine products harvested by licensed commercial fishermen and sold to a licensed bait or seafood dealer to be sold as bait are not reportable. Marine products harvested by licensed commercial fishermen and sold directly to a restaurant owner, operator or employee for consumption by the restaurant's patrons on the restaurant's premises are not reportable. Another deficiency in the present reporting system is that the MMPRs do not provide estimates of commercial fishing effort by gear type for each species landed. These deficiencies may limit the use of these commercial data for fisheries management purposes.

Table 2. Summary of commercial fishing seasons in Texas marine waters during 1990.

Organism	Method	Location	Product	Season	Time*	Exceptions
Shrimp	Trawl	Bait and major bays	Bait*	All year	Day*	2:00 p.m. closure (15 May-15 July). Night trawling permitted in Laguna Madre only
	Trawl	Major bays	All*	15 May-15 Jul	Day*	2:00 pm closure.
				15 Aug-15 Dec		None.
	Trawl	Gulf (0-7 fathoms)	All*	All year	Day*	Trawling prohibited from 15 May to 15 Jul inclusive, and 16 Dec to 1 Feb, inclusive.
	Trawl	Gulf (>7 fathoms)	All*	All year	24 h	Trawling prohibited from 15 May to 15 Jul, inclusive.
Crabs	Trap, trawl, net, hook, and line	Bays*, Gulf*	All	All year	24 h	None.
Oysters	Dredge	Bays*	Market oysters	1 Nov-30 Apr	Day*	Seasons may be modified by Texas Department of Health and/or Texas Parks and Wildlife Department.
Finfish	Perch trap	Bays*, Gulf*	Bait	All year	24 h	None.
	Trotline	Bays*	All*	All year	24 h	All gear must be removed from water between 1 p.m. Friday and 1 p.m. Sunday
Purse seine	Gulf	All*	Apr-Oct*	24 h	Legal in Gulf waters adjacent to all coastal counties, but prohibited within 1/2 mile of any shoreline or within 1 mile of any pass.	

Restrictions and Definitions:

*Gear fishing time

Red drum and spotted seatrout excluded

Night is defined as the time between 30 min. after sunset and 30 min. before sunrise.

Day is defined as the time between 30 min. before sunrise and 30 min. after sunset.

*Permitted in designated portions of bays.

Permitted in Gulf waters with restrictions.

Netting permitted from third Monday in Apr until Friday after second Tuesday in Oct.

IMPORTANT NOTICE — LEGISLATIVE CHANGE EFFECTIVE JANUARY 1, 1990. When reporting oysters handled, dealer must send \$1.00 for each barrel with payment information completed on blue copy. Oysters handled must be reported to the nearest whole barrel. One barrel equals: 3 boxes (10" x 20" x 13 1/2") with oysters piled no more than 2 1/2" above the height of the box at the center OR 2 gallons of shucked oysters.

PROCESSING CODES: R = Ungutted W = Gilled & Gutted C = Claws
F = Fillets E = Price per Each U = Headed **Gear Used (All species):** _____

SHRIMP CODES: O = Heads-On T = Tails L = 1/4 lbs per Each H = Headed X = Other (specify) _____

Black drum	0.61	TPWD unpublished data
Cobia	0.70	NMFS (1980)
Gafftopsail catfish	0.65	TPWD unpublished data
Grouper	0.70	NMFS (1980)
Snapper	0.61	TPWD unpublished data

Table A.3. Factors for converting blue crab to live weight, Eastern oyster to meat weight, and stone crab claw weight to live weight (TPWD unpublished data).

<u>Species</u>	<u>Conversion factors</u>
Blue crab	6 lb/1 dozen
Eastern oyster (to oyster meat)	17.5 lb/barrel
Eastern oyster (to oyster meat)	8.75 lb/gallon
Live Eastern oyster	1 barrel = 3 bushels, baskets or sacks.
Stone crab claw	1 lb claw = 4 lb live weight

Table A.4. Factors for converting shrimp heads-off weight to heads-on weight (Chin 1960).

<u>Species</u>	<u>Conversion factors</u>
Brown shrimp	1.61
Pink shrimp	1.60
Rock shrimp	1.67
Royal red shrimp	1.80
Seabob	1.53
White shrimp	1.54

Appendix B. Weight (lb) and ex-vessel value (\$), by bay system, of commercial finfish and shellfish landings along the Texas coast during 1972-1990.

Table 8.1. Weight (lb) of each species landed commercially from the Sabine Lake system, 1972-1990.

*License data are not additive for any row since dealers may have multiple licenses.

Large = Dealer located in a city with >40,000 population.

Medium = Dealer located in a city with 7,500 to 40,000 population.

Small = Dealer located in a city with <7,500 population.

Beginning in fiscal year 1984, all retail fish dealer licenses were combined into one category.

Table H.2. Number of commercial saltwater fishermen licenses sold in Texas in each fiscal year from 1956 through 1990. Before 1972, license sales were assigned to the fiscal year in which license applications were processed in Austin. Thereafter, sales reflect actual licenses for the license year, regardless of when the sales were processed.
