SEA RIM STATE PARK FEATURES
4,000 Acres of marshland and
5.2 miles of gulf shoreline. The
unique habitat includes beach
morning glory, snowy egrets,
yellow-crowned night herons,
ducks, alligators, blue crabs,
speckled trout, red drum and
flounder. Enjoy tent camping
on the beach, fishing, horse-
back riding, strolling the
boardwalks and paddling more
than 10 miles of marsh trails.
Far away from the cares of
urban life, discover a seaside
refuge bursting with life.

While Sea Rim State Park provides plenty of recreational
activities—paddling, fishing, birding—it is also a nature
preserve. Plant and animal communities depend upon you
to protect them. You can do so by walking on the beach or
on designated footpaths, but not on the dunes. Please
follow park rules and keep yourself safe, too. Be sure to let
someone know where you will be and when you plan to
return. Please be aware that paddlers usually hear the
motor boats that frequent the marshes before their
operators see or hear a kayak or canoe.

All trash should be removed before you leave, but please
leave all plants, animals, and artifacts you see untouched.

The park offers programs and special events. Call park
headquarters for details and for cabin rentals.

BEACH AND DUNES

Sea Rim gets its name from the point where the marshes meet the sea. Between the sea and the marshes lie the beach and dunes, two habitats that each support a diverse array of interconnected life.

Along the beach, you encounter clams, mole crabs, ghost shrimp, gulls, plovers, willets and other sea and shore birds. Sargassum, a type of algae that washes onshore from April to August, is a lynchpin for life on the beach and dunes. It feeds and provides homes for fish and invertebrates while in the water. After it washes onto the beach, it feeds larger animals and enables dune formation both by preventing erosion and by nourishing the growth of dune plants including bitter panicum, marsh hay cordgrass, and Virginia dropseed.

The beach offers unparalleled opportunities to catch game fish, including spotted sea trout and red drum. You can tent camp on the beach while admiring the night sky and being lulled to sleep by the surf. The beach side of the park also affords horseback riding, swimming, paddling, birding, and many other wildlife viewing opportunities, including observation from the marsh and dune boardwalks.

MARSHES

A maze of marsh plants intermixed with water extends inland from the dunes, a home that is both land and water. Because Sea Rim’s brackish and intermediate waters have less salt than salt marshes, they support a great variety of marsh plants. The root systems of these plants help build and stabilize marsh soil and the plants also provide food for many of the waterfowl home to the marshes. These waters act as both home and nursery for game fish and shellfish whose larvae migrate from the sea into the marshes. Mammals, including raccoons, otters, coyotes, and mink also lurk in the marshland. You may even see an American alligator hunting these waters.

The marshes abound with paddling, birding, and fishing opportunities. In the park’s marsh unit, at the boat launch, a new air-conditioned cabin offers creature comforts right where your next day’s adventure begins.
